Preface

General Information

I. Copyright

The entire contents of this instruction manual, including any future updates, revisions, and modifications, shall remain the property of SIMRAD at all times. Unauthorized copies or reproduction of this manual, either in part or whole, in any form of print and electronic media, is prohibited. The contents herein can only be used for the intended purpose of this manual.

II. Disclaimer

SIMRAD is devoted to publish and maintain this product manual. As we continue to improve our AIS products to satisfy all customers' needs, information in this document is subject to change without notice. SIMRAD does not make any representations or warranties (implied or otherwise) regarding the accuracy and completeness of this document and shall in no event be liable for any loss of profit or any commercial damage, including but not limited to special, incidental, consequential, or other damage.

III. Safety Warning

It is important to know that AIS is designed for the purpose of anti-collision and serves as a complement to navigation. It is not the absolute navigational equipment and does not replace any navigational system installed on board.

Any AIS device cannot guarantee monitoring and receiving signals from all vessels in the surroundings unless those vessels are equipped with AIS devices.

The coastline map in this transponder is neither verified nor approved by Hydrographic Authorities. It is not an Electronic Chart System and therefore should not be used for navigation. The information provided by the coastline map is for reference only and should be used together with other navigation sources and devices.

ELECTRICAL SHOCK HAZARD

Improper disassemble or modification could cause electrical shocks, fire, or personal injury.

Only qualified personnel could work on the interior of the equipment.

MAKE SURE THE POWER SOURCE AND THE POWER INPUT ARE MATCH

Incorrect power sources will damage the equipment and may even result in fire.

Please ensure the correct power input on the adaptor before installation.

AVOID DIRECT CONTACT WITH RAIN OR SPLASHING WATER

Electrical shock or fire could be resulted if water leaks into the equipment.

NOTE/INFORMATION

➔ *Note:* Important notices and information will be noted in this Installation and Operation Manual

IV. Product Category

This product is categorized as "protected" in accordance with the requirements as defined in IEC 60945.

V. Compass Safe Distance

Safe distance to the transponder (and junction box) unit is:

- Standard-magnetic-compass: 0.50 m
- Steering-magnetic-compass: 0.40 m

VI. Hardware / Software Version

- Hardware version: A -010
- Software version: 1.0.6.39

The model name/number, hardware information, and firmware (software) version of the transponder can be identified through MKD at MENU/DIAGNOSTICS/VERSION. The software maintenance/upgrade of the transponder can be carried out on board via USB interface. The onboard documentation as described in Appendix C can be used to assist reflecting software maintenance records.

VII. Type Approval

The SIMRAD V5035 AIS transponder complies with applicable international standards and is type approved in accordance with the European Marine Equipment Directive.

VIII. Declaration of Conformity

Hereby, SIMRAD declares that this V5035 is in compliance with the essential requirements and other relevant provisions of Directive 96/98/EC.

IX. Disposal Instruction

Do not dispose of this device with unsorted waste.

Improper disposal may be harmful to the environment and human health. Please refer to your local waste authority for information on return and collection systems in your area.

X. Contact Information

For sales, services, and technical supports, please contact your local SIMRAD representatives or SIMRAD at http://pro.simrad-yachting.com

Contents

1 What is AIS?

The Automatic Identification System (AIS) is a Very High Frequency (VHF) radio broadcasting system that transfers packets of data over the VHF data link (VDL) and enables AIS equipped vessels and shore-based stations to exchange identification information and navigational data. Ships with AIS transponders continually transmit their ID, position, course, speed and other data to all nearby ships and shore stations. Such information can aid greatly in situational awareness and provide a means to assist in collision avoidance.

AIS equipment is standardized by ITU, IEC, IALA and IMO and is subject to approval by a certification body. The following AIS devices have been developed for variant applications.

- **AIS Class A:**
  Mandated by the IMO for vessels of 300 gross tonnages and upwards engaged on international voyages, cargo ships of 500 gross tonnages and upwards, as well as passenger ships. It transmits typically on 12.5 watt output power.

- **AIS Class B:**
  Provides limited functionality and is intended for non-SOLAS commercial vessels and recreational vessels. It transmits typically on 2 watt output power.

- **AIS Receiver:**
  Only receives AIS signal and does not have transmitter to send out AIS signal. Suitable for recreational vessels that do not want to send out its vessel information.

- **AIS Base Station:**
  Is provided by aids-to-navigation authorities to enable the ship to shore / shore to ship transmission of information. Networked AIS Base Stations can assist in providing overall maritime domain awareness.

- **AIS AtoN (Aids to Navigation):**
  Provides an opportunity to transmit position and status of buoys and lights through the same VDL, which can then show up on AIS-ready devices within the range.

- **AIS SART:**
  Search and Rescue Transmitter using AIS can be used to assist in determining the location of a vessel in distress. It is typically used on life rafts.

- **AIS on Search and Rescue (SAR) Aircraft:**
  Used on airplanes and helicopters to assist search and rescue operation.

2

System overview

Product Description

The SIMRAD V5035 is a new generation AIS Class A transponder fully compliance with IMO, IEC, and ITU international standards. It provides a compact single box solution, easy to install and operate. The unit is designed with advanced technology which sets a new standard for quality, performance, and value. It is an excellent choice for SOLAS vessels, commercial vessels, and professional vessels.

The V5035 consists of a transceiver radio unit, an integrated GPS receiver, a controller unit, and a color 3.5" LCD display with menu keypads. The radio has three receivers -- two TDMA receivers and one DSC receiver. The transmitter alternates its transmission between the two operating TDMA. The controller unit creates and schedules data packets (containing dynamic, static and voyage related data) for transmission based on the IMO performance standard for AIS.
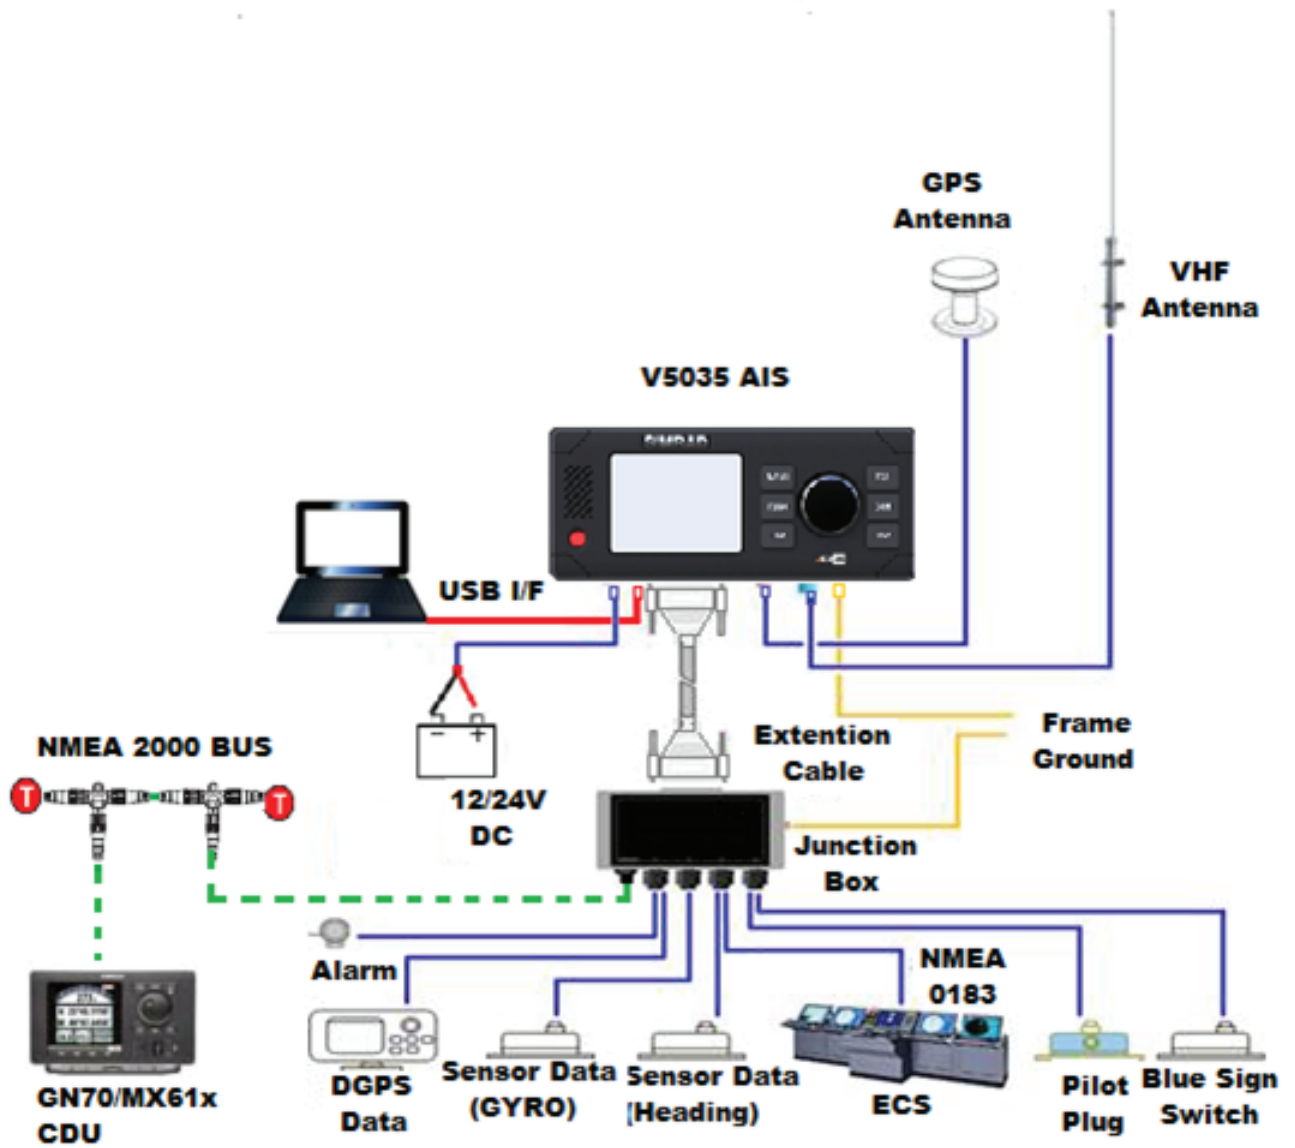

The V5035 can be connected to the ship's sensors as required by the IALA guidelines through an external junction box (supplied in the package). The unit can also interface external navigation and presentation systems that support IEC 61162-1 related sentences. It is also capable for connection to Long Range system like Inmarsat C. The V5035 supports both IMO and Inland AIS which is configurable by the software.

The color LCD display and menu keypads provide an intuitive graphical user-friendly interface to the system. It can display the location of other vessels, aids to navigation and search and rescue vessels. The AIS transmit and receive status are shown on the screen which helps user to know the working status of the unit easily. The LCD and keypad can also be used to send and receive messages, perform configuration as well as supervise the systems status.

Main Features

- IMO Compliant Class-A AIS system
- Supplied as a standalone system with junction-box, GPS antenna and Pilot Plug
- Easily integrates with Simrad GPS and Charting systems via NMEA2000 interface.
- Perfect complement to Simrad IMO GPS/GNSS systems (GN70, MX610, MX612)
- Multiple sensors input ports and bi-directional data ports
- Control knob and keypad for easy operation
- Color 3.5" LCD display

Parts list:

Description	Part Number
MX5035 Class A AIS Transponder unit w/GPS antenna and USB cable	000-12249-001
Junction box	000-12324-001
Pilot Plug Asy.	000-12325-001
U-bracket mounting kit	000-12327-001
37-pin extension cable	000-12328-001
3-pin power cable	000-12329-001
Panel mount holder kit	000-12330-001
User manual	988-10838-001

Installation procedures

Please familiarize the manual content before begin installation. Use the following recommended steps for installation.

1. Mount the transponder unit to a desired location
2. Mount junction box
3. Install VHF antenna
4. Install GPS antenna
5. Connect all external sensors and data interfaces to the junction box
6. Connect all required cables to the main transponder unit
7. Power on the main transponder unit
8. Complete configuration settings
9. Perform system functional test

RF cable requirements

The following RF cables are recommended to install the V5035 - .
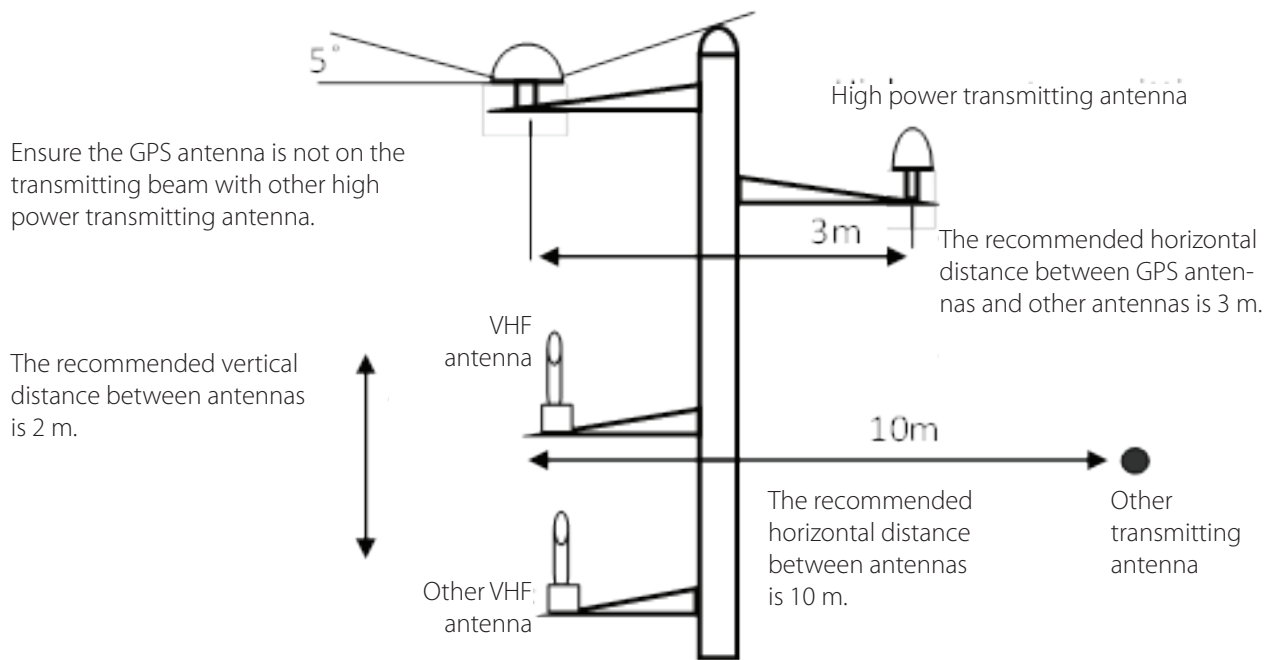

- VHF Antenna Cable
  Type: 5D-FB or equivalent
  Connector: SO-239 (Male)
- GPS Antenna Cable
  Type: RG58A/U or equivalent
  Connector: TNC (Male)
  Cable and connector are supplied as part of the GPS antenna.

VHF antenna installation

The quality and positioning of the antenna are the most important factors dictating AIS performance. It is recommended that a VHF antenna with omni directional vertical polarization be specifically tuned for AIS operation band. Since the range of VHF signals is largely decided by line of sight distance, the VHF antenna should be placed as high as possible and at least 5 meters away from any constructions made of conductive materials.

To avoid interference, the VHF antenna location should be placed accordingly as diagram below:

Ensure a free 360° horizon with a vertical observation of 5°.

5°

High power transmitting antenna

Ensure the GPS antenna is not on the transmitting beam with other high power transmitting antenna.

3 m

The recommended horizontal distance between GPS antennas and other antennas is 3 m.

VHF antenna

The recommended vertical distance between antennas is 2 m.

10m

Other transmitting antenna

Other VHF antenna

The recommended horizontal distance between antennas is 10 m.

VHF/GPS antenna locations

GPS antenna installation

The GPS antenna must be installed where it has a clear view of the sky, so that it may access the horizon freely with 360° degrees, with a vertical observation of 5 to 90 degrees above the horizon as illustrated below.

GPS antenna location

Enter the GPS antenna location data in "SHIP SETTING" after the installation.
Mounting SIMRAD V5035

Use the following guidelines to check the installation location for your AIS transponder:

- The AIS transponder should be mounted in a location that is accessible and readable to user at all time.
- The transponder should be installed in a protected environment away from direct rain and water contact.
- The transponder is designed to operate in an environment with 15°C ~ 55°C temperature. Environments with excessive heat may cause damages to the transponder.
- The transponder should not be installed near flammable or hazardous environments.
- The AIS transponder should be installed at least 0.5 m away from magnetic compasses.

Mounting Transponder
Panel mounting (1)

1. Line up the mounting template on control panel to sketch an outline for the cutting area.
2. Using a jigsaw carefully cut along the sketched cutting area.
3. If necessary, clean up edge with glass paper or file.
4. Mount the transponder through the opening.
5. From the rear, install the mounting brackets with the M3X8 screws.
6. Apply the mounting bracket screw (brackets are directional, ensure correct one is fitted to each side) on each side for a firm fix.

Panel mounting (1)
Panel mounting (2)
Mounting junction box

Mounting junction box (1)

Mounting junction box (2)
Mounting pilot plug

The Pilot Plug device provides connecting interface to pilots and other mariners to connect their own PC or other portable device to V5035 on board.

Tx A Pin1 (Red)

Tx B Pin 4 (White)

Rx A Pin 5 (Black)

Rx B Pin 6 (Green)

Shield Pin 9

Pin number	Function	Wire color
Pin 1	Tx A	Red
Pin 2	--

Pin 4	Tx B	White
Pin 5	Rx A	Black
Pin 6	Rx B	Green
Pin 7	--	
Pin 8	--	
Pin 9	Shield (Ground)	

Connecting to MX5035 Junction Box

Use the following guidelines to connect the Pilot Plug to the V5035 Junction box.

Please refer to External Connectors (Junction Box) page 18.

To transponder main unit

Pilot plug

PILOT_IN A connects to Rx A (Black)
PILOT_IN B connects to Rx B (Green)
PILOT_IN GND connects to Shield

PILOT_OUT A connects to Tx A (Red)
PILOT_OUT B connects to Tx B (White)
PILOT_OUT GND connects to Shield

Note: Shield can connect to either PILOT_IN GND or PILOT_OUT GND.

External connectors (Transponder main unit)

Frame
Ground

Name	Description	Type of connector
VHF	VHF antenna connector	SO-239 (female)
GPS	GPS antenna connector	TNC (female)
Power	Power input connector	Round type, 3 pins
USB	USB connection to PC	Mini type USB
Junction box	Extension connection to Junction box	D-Sub 37 pins
Frame ground	Connect to ship frame	

Vessel power supply requirement
Connect to the ship's power source, ideally an uninterrupted power supply (UPS), through a 2-pole switched fused supply to allow isolation for servicing. Power requirement is 12-24 V DC typical 5 A minimum. Required conductor area, cable length 0-10 m is 1.5 mm2 ø minimum.

➔ *Note:* The Class A power supply requirement should comply with IMO guidelines for the class of vessel concerned. National authorities and classification societies may have their own power supply requirements; these should also be considered.

➔ *Note:* Some boats require frame ground connection of all electronic devices on the ship frame.

External connectors (Junction box)
Connector	Label name	Description	Function usage
Sensor 1	SEN1_IN GND	Sensor 1 ground	Connect to data sources such as heading, gyro, or other type of sensors.
	SEN1_IN A	Sensor 1 input A	
	SEN1_IN B	Sensor 1 input B	
Sensor 2	SEN2_IN GND	Sensor 2 ground	Connect to data sources such as heading, gyro, or other type of sensors.
	SEN2_IN A	Sensor 2 input A	
	SEN2_IN B	Sensor 2 input B	
Sensor 3	SEN3_IN GND	Sensor 3 ground	Connect to data sources such as heading, gyro, or other type of sensors.
	SEN3_IN A	Sensor 3 input A	
	SEN3_IN B	Sensor 3 input B	
Pilot plug	PILOT_IN GND	Input Ground	Pilot plug port
	PILOT_IN A	Input A	
	PILOT_IN B	Input B	
	PILOT_OUT GND	Output Ground	
	PILOT_OUT A	Output A	
	PILOT_OUT B	Output B	
Alarm	ALARM NO	Alarm normally open	
	ALARM NC	Alarm normally closed	
	ALARM COM	Alarm common	

Connector	Label name	Description	Function usage
DGPS input	DGPS_IN GND	DGPS input ground	DGPS sensor
	DGPS_IN A	DGPS input A	
	DGPS_IN B	DGPS input B	
DGPS output	DGPS_OUT GND	DGPS output ground	DGPS sensor
	DGPS_ OUT A	DGPS output A	
	DGPS_ OUT B	DGPS output B	
LR input	LR_IN GND	LR input ground	Long range input
	LR_IN A	LR input A	
	LR_IN B	LR input B	
LR output	LR_OUT GND	LR output ground	Long range output
	LR_ OUT A	LR output A	
	LR_ OUT B	LR output B	
Display	DISP_IN GND	DISP input ground	Connect to the data output of an external display system such as ECDIS.
	DISP_IN A	DISP input A	
	DISP_IN B	DISP input B	
	DISP_OUT GND	DISP output ground	Connect to the data input of an external display system such as ECDIS.
	DISP_OUT A	DISP output A	
	DISP_OUT B	DISP output B	
Blue sign	BLUE_SIGN A		Connect to a blue sign switch.
	BLUE_SIGN B		

→ **Note:** RTCM-SC-104 beacon input is currently not implemented by the DGPS_IN input.

Item	Usage
Termination switches	The switches provide line termination configuration. Termination off Termination on
Jumper for NMEA 2000 shield and ground	The jumper's purpose is to wire together NMEA2000 cable's shield and ground. Depending on your scenario, you may choose not to connect them together.

Connecting extension cable

Use the 37-pin- extension cable (1.8M) provided in the package connect V5035 to the junction box.
Connecting V5035 with Junction box
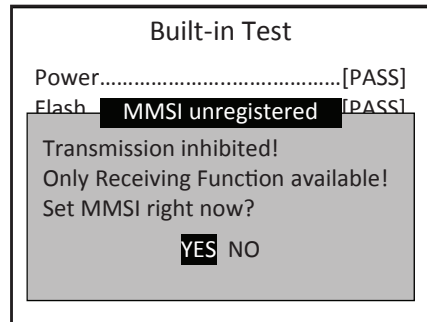

Configuring the V5035

The following items must be completed before initial configuration.

1. Ensure VHF and GPS antennas are connected to the transponder main unit.

2. Ensure the 37-pin-connector extension cable is connected from the transponder main unit to the junction box.

3. Ensure the power cable is connected and supplied with stable voltage/current power source.

4. Ensure applicable external devices are connected through the junction box.

Initial Configuration

The initial configuration, particular, MMSI (Maritime Mobile Service Identity) number must be done before operation. The following initial configuration is required:
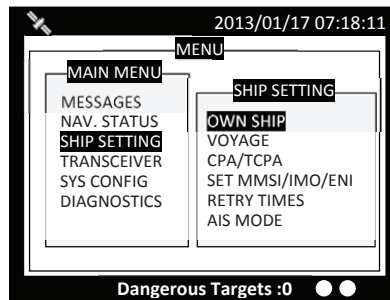

1. Setup 1: MMSI should be correctly programmed.

```
                    Built-in Test

Power...................................[PASS]
Flash    MMSI unregistered    [PASS]
Transmission inhibited!
Only Receiving Function available!
Set MMSI right now?

                    YES  NO
```
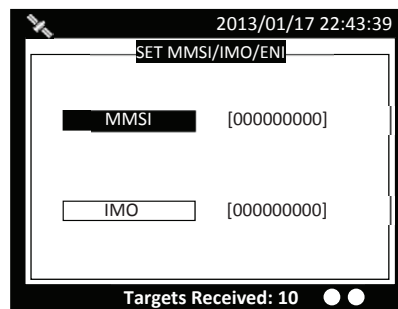

Built-in Test

2. Press MENU and select main menu item SHIP SETTING. (Password required, default is "0000")

A. Setup call sign, ship name, ship type, external/internal GPS antenna position in OWN SHIP.

```

4 Operation

Panel description

| Item No.	Name	Description
1	Power switch	Power On/Off (push button over 5 seconds)
2	Beeper	Sounds when buttons are pushed and by MOB alarm
3	Display	3.5" LCD color screen

Key	Description
MENU	Return to main menu / detail menu select
FUNC	Different function on display mode (Zoom In/Out, etc) and has different roles in submenus
DIM	Adjust dim degree (refer to page 28)
Knob	Rotate to select, press to confirm
DISP	Change to different display modes: 1. Coastal view 2. Radar view 3. AIS target list 4. Dangerous target list 5. Own ship detail 6. GPS satellite information 7. Region setting list
SRM	Emergency SRM broadcast
ESC	Cancel/Back to main menu, or press and hold for 3 seconds to access alarm list

Status bar

The status bar constantly indicates Date (YYYY/MM/DD), Time, GPS status, ALR, and SRM.
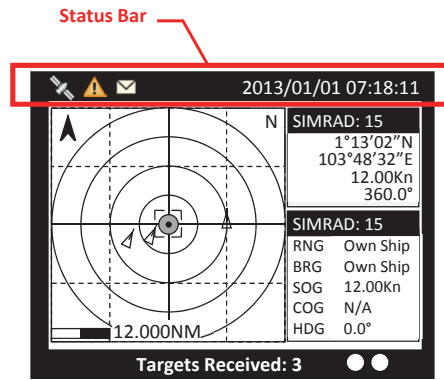

Status Bar

Status bar

Icon	Description
	GPS Status: position fixed
	GPS Status: non-fixed
	ALR Status: alarm messages occurs
	Inbox SRM: unread coming SRM message
	SART/MOB: SART or MOB message received
	EMMA warning (RFM23): warning received
	ETA/RTA: message received
	Water levels (RFM24): message received

Transmission and reception bar
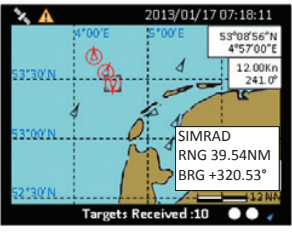

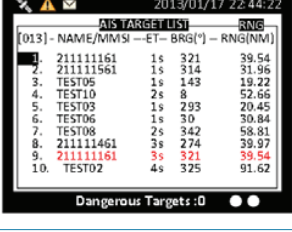

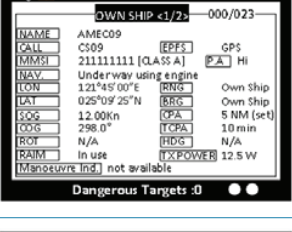

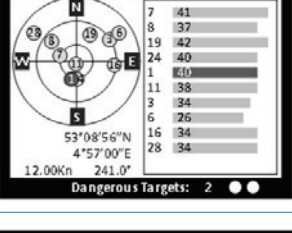

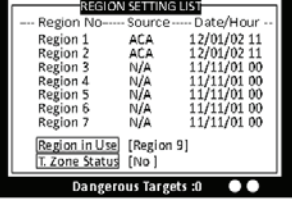

The Transmission & Reception bar constantly displays real time status of transmissions and receptions on any display modes. The 3 default displayed messages are received AIS targets, dangerous targets, and Tx power level.

Transmission & Reception Bar

Item No.	Name	Function	
1	Text banner	Shows the numbers of "Targets Received" and "Dangerous Targets" automatically.	
2	Indicators Ch.87 Ch.88	(grey circle)	No transmissions & receptions: No flash
		(green circle)	Reception of AIS message: Flash green color
		(red circle)	Transmission of AIS message: Flash red color
3	Function Icon (Coastal view only)	zoom in/out up/down left/right target selected SART/MOB	The function icon indicates the knob's action differently in operations. Push FUNC enables the knob to operate different actions SART/MOB alert icon only available when valid SART or MOB target is received
	Function Icon (Radar view only)	zoom in/out target selected SART/MOB	
4	Inland mode	IL	Indicate the system is running Inland mode
	Blue sign	B	Indicate Blue Sign device is connected

Display modes

For quick access, users can rotate display modes by simply pressing the DISP button.

Display mode	Screenshot	Purpose
Coastal view		Display all targets on basic coastline map (Refer to Coastal View, page 27)
Radar view		Displays all targets on radar view (Refer to Radar View, page 28)
AIS target list		Shows all received ship data (Refer to AIS Targets, page 40)
Dangerous target list		Shows all dangerous AIS targets presently (Refer to Dangerous List, page 43)
Own ship detail		Shows all the details of own ship (Refer to Own Ship detail, page 39)
GPS satellite information		Shows the GPS satellite current usage status (Refer to GPS Status, page 54)
Region setting list		Show all the Region of own ship (Refer to Own Ship detail, page 39)

Target symbol descriptions

Symbols for each AIS target displayed on the radar view is as described below:

Symbol	Description
Own Ship	GPS Reception: Normal / Color: Black and Gray Under normal GPS reception, own ship is located in the center of the radar view.
Own ship	GPS Reception: No GPS / Color: Blue Without GPS reception, own ship needs to be located manually.
AIS target	Color: Black Ship equipped with AIS system in the surrounding sea will appear on the radar view as an AIS target.
Selected target	Color: Black / Flashing Colored Frame Use the arrow keys to select any target on the radar view. After selected, press <ENT> and the detailed information on each target can be viewed.
Dangerous target	Color: Red / Circled Frame When distance to a ship is smaller than CPA/TCPA, the target will be circled in RED. Use the arrow keys to select the dangerous target and to view its detailed information.
Friend ship	Color: Magenta If any pre-stored Friend Ship is nearby, the Friend Ship will appear in Magenta on the radar view.
Los signal target	Color: Black / Red Cross If reception of an AIS target has ceased over 10 minutes, a "X" will be displayed over it. The target will disappear from the Radar View after its reception has ceased for one hour.
AtoN (Real)	Color: Black / Plus Sign The icon will be displayed if any AIS AtoN (Aids to Navigation) Real is in the range of reception.
AtoN (Virtual)	Color: Black / Plus Sign and Undercut The icon will be displayed if any AIS AtoN (Aids to Navigation) Virtual is in the range of reception.
AtoN (off position)	Color: Red / Plus Sign The icon will be displayed if any AIS AtoN (Aids to Navigation) is in off position status.
SAR	Color: Black The icon will be displayed if any air plane is in the range of reception.
SART	Color: Red / Cross The icon will be displayed if any SART message is sent out.
Base station	Color: Green The icon will be displayed when any base station is in the reception range.

Coastal view
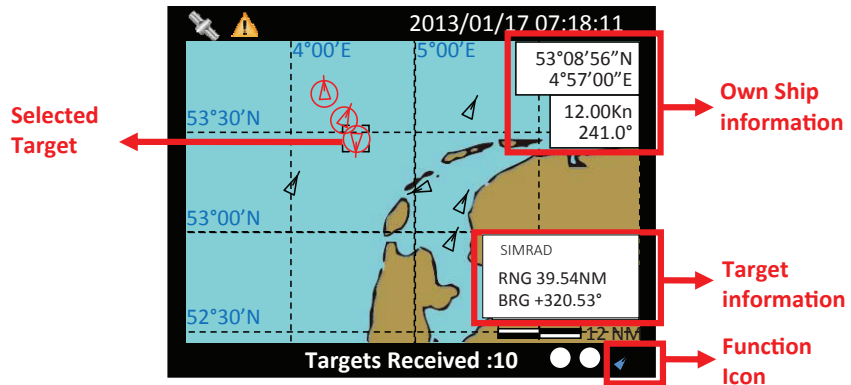

Item	Function
Own Ship information	Own-ship information for latitude, longitude, SOG and COG
Target information	Display the target information such as vessel name or MMSI as well as range and bearing relatively to the own ship
Function Icon (Coastal View)	Users can select one of the 5 viewing modes by pressing the FUNC button. Turn the knob to change the selected range, position, AIS target or SART/MOB target
zoom in/out	The plot range can be adjusted by turning the knob which cycles through the ranges 24, 12, 6, 3, 1.5, 0.75, 0.5, 0.25, 0.125 and 0.05 nm.
up/down	Turn the knob to move the map vertically
left/right	Turn the knob to move the map horizontally
target selected	Turn the knob to navigate between different AIS targets, while press the knob to see more details of the target.
SART/MOB	This icon appears only when valid SART or MOB target is received. Turn the knob to navigate between different SART/MOB targets, press the knob to see more details of the target.

⚠ The coastline map in this transponder is neither verified nor approved by Hydrographic Authorities. It is not an Electronic Chart System and therefore should not be used for navigation. The information provided by the coastline map is for reference only and should be used together with other navigation sources and devices.

Radar view
Radar View displays own ship and target ships' statuses, and their correlations.

On this view, the vertical grid lines are the longitudinal lines and the horizontal grid lines are the latitudinal lines. Underneath the radar view is a proportional chart scale showing the current ratio displayed.

Under Radar View, only 3 function icons are available - 🔍 Zoom In/Out, ◤ Select Target and ❌ SART/MOB. The operation with FUNC button is same as described in page 27.

Radar View supports three ship orientation modes, North up, Head up, and Course up. Each orientation mode is indicated by the uppercase letter (N, H, or C) on the right upper corner. The left upper corner is the north arrow indicating the direction of north.

N	NORTH UP	The chart orientation is fixed and true north is always pointing up.
H	COURSE UP	The orientation is determined by the own ship's traveling course.
C	HEAD UP	The orientation is determined by the direction of own ship's bow.

Dimmer setting
Press the button "DIM" to enter the dimmer setting page.

Button	Description
Knob (Turn left/right)	Adjust screen brightness (decrease/increase)
Knob (Press)	Save and leave the page
DIM	Restore screen brightness to default setting (100)
MENU, ESC	Leave the page without saving

Entering text

The knob on the front control panel is used for entering and editing text. The figures below show the text entering procedures.

1. Turn the knob to traverse the menu items up or down. Once selected, press the knob to select the item for text entering.

2. Select a character position to edit. Turn the knob to move the cursor left or right and press the knob to confirm the position.

3. System is now in character selection mode as the cursor position is highlighted. Turn the knob to pick an available character and press the knob for character selection.

	A	B	C	D	E	F	G
H	I	J	K	L	M	N	O
P	Q	R	S	T	U	V	W
X	Y	Z	0	1	2	3	4
5	6	7	8	9	[	\	]
^	_	!	"	#	$	÷	&
'	(	)	*	+	,	-	.
/	:	;	<	=	>	?	@

→ *Note:* Space is first character for selection.

4. Use steps 2 and 3 to finish entering all needed characters. To confirm and save, press down the knob and hold for 2 seconds.
1: Traverse menu
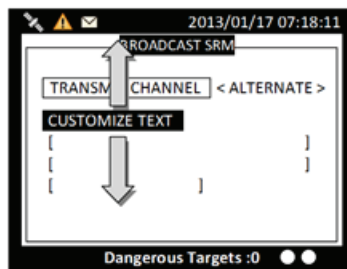

Turn knob to move up or down

Press to enter

2: Select a character position
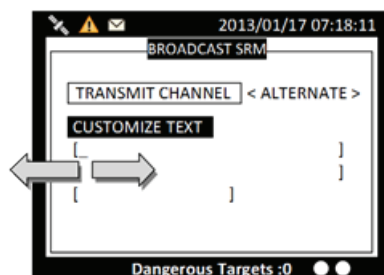

Turn knob to move left or right

Press to start editing

3: Pick character
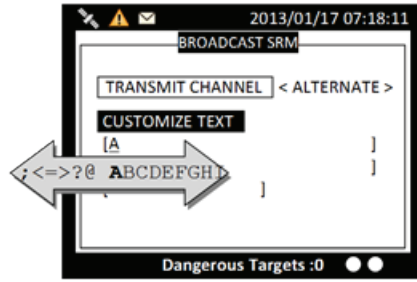

Turn knob to select charactert

Press to confirm

4. Confirm and save
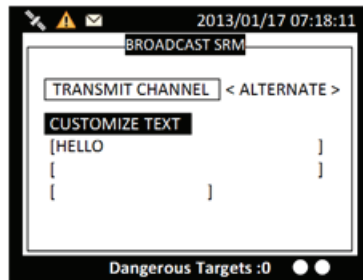

To save entered text, press and hold the knob for 2 seconds.

Menu tree overview

Press MENU button to enter MAIN MENU. Please note inland menus, Inland Messages and Inland Settings, are only available when the unit operates under inland mode.

How to access and use MAIN MENU
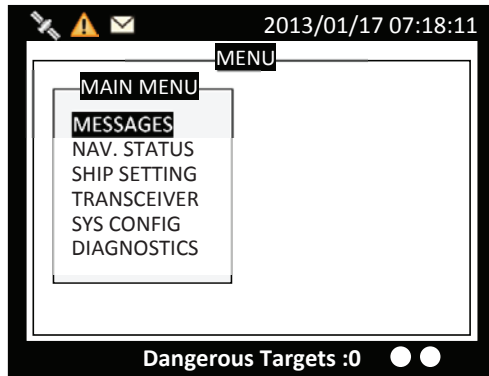

Rotate knob to select MAIN MENU items and push the knob to select sub-menu items:
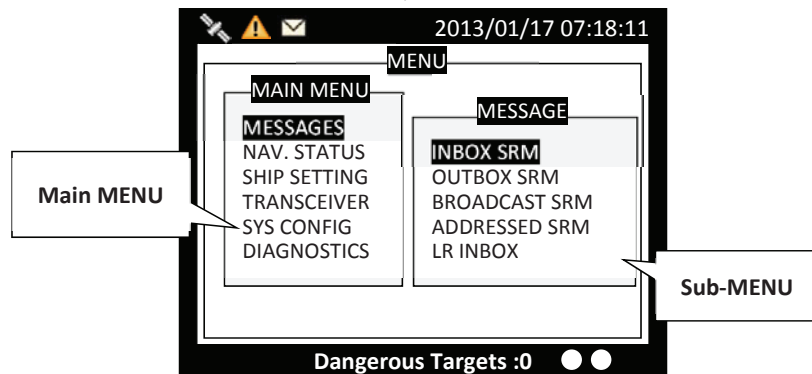

Menu item brief description

MESSAGES	
INBOX SRM	Log of safety related messages (SRM) received
OUTBOX SRM	Log of safety related messages (SRM) sent
BROADCAST SRM	Send SRM.
ADDRESSED SRM	Send specified targeted SRM.
LR INBOX	Log of received inquiry messages from other
INLAND MESSAGES	
ETA/RTA INBOX	Log of ETA(RFM21), RTA(RFM22) message received
ETA OUTBOX	Log of ETA(RFM21) sent
CREATE ETA MSG	Create ETA(RFM21) message
POB OUTBOX	Log of PERSON message (RFM55 or IFM16) sent
CREATE POB MSG	Create PERSON message (RFM55 or IFM16)
EMMA WARNING	Log of EMMA warning (RFM23) received
WATER LEVEL	Log of WATER LEVEL (RFM24) received
NAVIGATION STATUS (Display a variety of navigation information)	
OWN SHIP	Your vessel information
AIS TARGETS	Navigation status and boat information of other AIS-equipped vessels.
REGION LIST	Regional information status
ALARM LIST	Alarm information, To access Alarm List directly press and hold ESC button for 2 seconds
ALARM HISTORY	Alarm history record

SENSOR STATUS	Display sensor statuses
DANGEROUS LIST	Dangerous ship list
MOB LIST	MOB list of registered MOB users
FRIEND SHIPS	Friend ship list
SHIP SETTING (Basic vessel information setting)	
OWN SHIP	Your vessel setting (password required, default is 0000)
VOYAGE	Navigation setting
CPA / TCPA	CPA / TCPA
SET MMSI / IMO / ENI	Change MMSI / IMO / ENI number
RETRY TIMES	Times to resend messages.
AIS MODE	Configure AIS Mode to SOLAS or INLAND
INLAND SETTING	
VESSEL DATA SET.	Configure Vessel data
ETA SETTING	Configure ETA
NUMBER OF PERSON	Set number of persons
BLUE SIGN SET.	Set Blue sign settings
REPORT RATE SET.	Set report rate settings
TRANSCEIVER (Setting for AIS receiving and sending)	
AIS TX	Transceiver status: turn on or off AIS message transmitting
DSC RX	DSC Monitor: turn on or off DSC monitoring function
GPS ANT. VOLTAGE	GPS antenna feeding voltage: set to 3.3V or 5V Note:- Antenna supplied with unit is a 3.3V unit
SYSTEM CONFIGURATION	
CUSTOMIZE	Personalization settings
RADAR VIEW	Radar configuration
MAP CALIBRATION	Map offset setting
SENSOR CONFIG.	Port configuration
FACTORY	Default factory setting
PASSWORD	Password change (default password: 0000)
LONG RANGE SET.	Remote inquiry setting
LR BCST SET.	Enable/Disable Long Range Broadcast
DEST TABLE SET.	Table storing destinations
ALARM SETTING	Configure ALR sentence status (Enable/Disable)
VSWR SETTING	VSWR setting
DIAGNOSTICS	
SYSTEM ON/OFF	Device activated log
MEMORY TEST	Memory test
SENSOR PORT	Transmission port test
TFT-PANEL	Screen panel
KEYBOARD TEST	Button test
GPS STATUS	GPS positioning status
TRANSCEIVER	Transponder status
COMMUN. TEST	Test communication
PANEL TEST	Test Panel
VERSION	Firmware version

Messages

The transponder features SRM alert pop-ups that can appear any time during operation. When a SRM (Safety Related Messages) from other AIS equipped vessels is received, you can either read and acknowledge it by pressing the knob or ignore the message by press ESC. If there is any unread message, the upper left corner will display ![icon], the new message icon. An example of a pop-up SRM message is shown below.
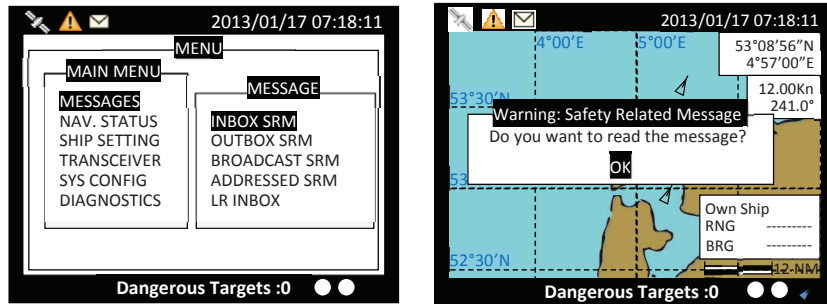

Message and SRM pop-up alert

Inbox SRM

You can read received SRM messages under Inbox. Turn the knob to traverse the message list and highlight your choice. Read the message content by pressing the knob.
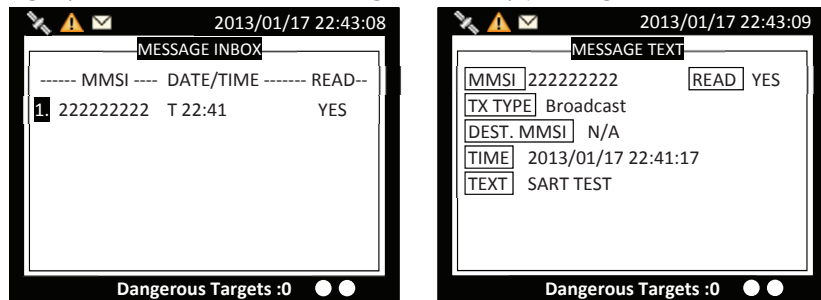

Received message list and message details

When pressing the FUNC button, system will ask whether the highlighted message should be deleted. Press knob to confirm your choice.

Outbox SRM

You can read all sent SRM messages under OUTBOX. Turn the knob to traverse the message list and highlight your choice. Read the message content by pressing the knob.
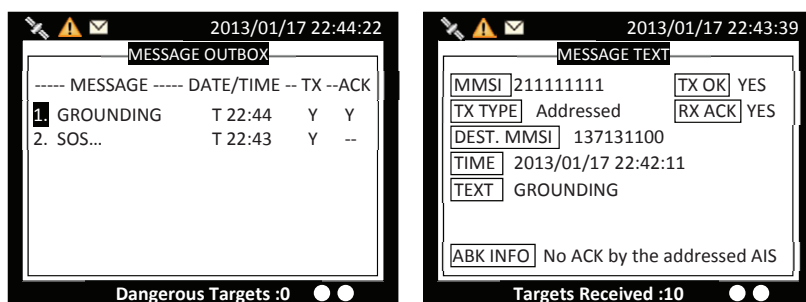

Sent message list and message details

When pressing the FUNC button, system will ask whether the highlighted message should be deleted. Press knob to confirm your choice.

When an addressed message is sent, the addressee will return an acknowledgement upon receipt of the message. The received acknowledgement is shown as "Y" in above example.

Broadcast SRM

This submenu allows the users to compose a Safety Related Message (SRM). Maximum length for the message is 90 characters. TRANSMIT CHANNEL gives you the option to send the message through channel A, B or Alternate. By Alternate, which is the default option, the system

will select the channel automatically.

Press the knob to enter text input mode, then use the knob to enter text. When text editing is finished, press ESC to leave the text input mode.

To send the message, press MENU or ESC and the system will ask whether to send the message. Select OK to send, CANCEL to cancel and return to main menu.
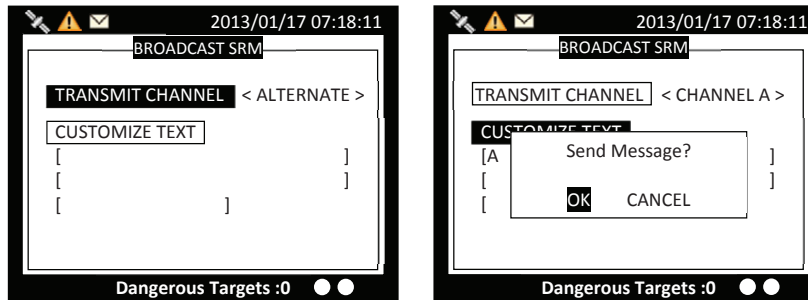

Edit and send Broadcast SRM

Addressed SRM

ADDRESSED SRM means a SRM addressed to a certain MMSI number which can be selected from the target list or input manually. By entering into the submenu "ADDRESSED SRM", users will be prompted to select the addressee from the target list. Here you can either pick the addressee or press ESC to leave the target list and enter the MMSI number manually.

Press the FUNC button and you have the possibility to add the selected vessel to your friend list, or to sort the list by MMSI, range or bearing. Please refer to page 40 for more details.
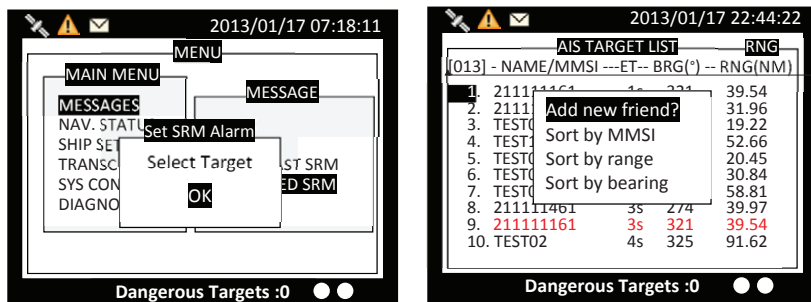

Addressed SRM

After entering the MMSI number, choose the transmit channel as described in page 34, then compose the message. Maximum length for the message is 85 characters.

To send the message, press MENU or ESC and the system will ask whether to send the message. Select OK to send, CANCEL to cancel and return to main menu.
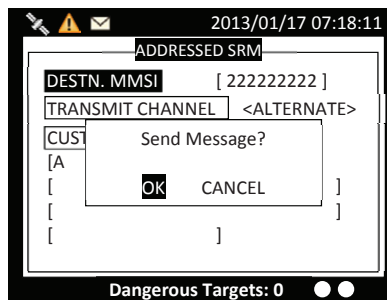

Send message

Long range SRM

When the transponder is connected to a long range communication system via the long range communication port then long range interrogations may be received. These are requests for information from a distant base station beyond normal AIS operation range. LONG RANGE SRM holds all received Long Range Interrogation messages.

Turn the knob to traverse the message list.
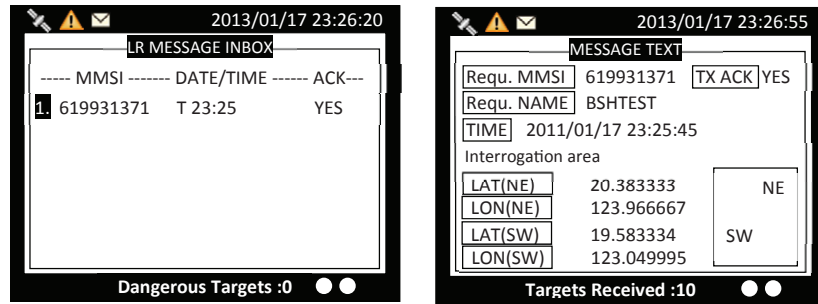

Long range SRM

Turn the knob to traverse the message list and highlight your choice. Read the message content by pressing the knob.

When pressing the FUNC button, system will ask whether the highlighted message should be deleted. Press knob to confirm your choice.

Inland messages

The transponder has capability to send Inland ETA (Estimated Time of Arrival) messages and receive Inland RTA (Recommended Time of Arrival) messages which are used when communicating with ports, locks and bridges on the inland water ways. Note that the menu is only available when the unit is operating under inland mode.
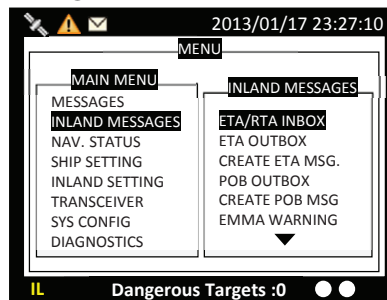

Inland message

ETA/RTA inbox

The received messages of ETA (RFM21) and RTA (RFM22) can be read in the ETA/RTA Inbox. Turn the knob to traverse the message list and highlight your choice. Read the message content by pressing the knob.
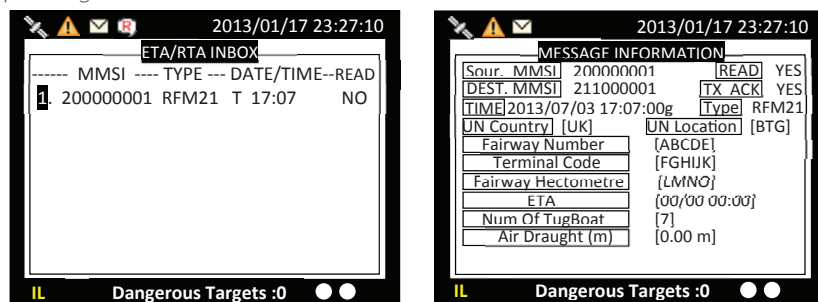

ETA/RTA inbox and message information

ETA outbox

The submenu displays log of sent ETA (RFM21) messages. Turn the knob to traverse the message list and highlight your choice. Read the message content by pressing the knob.
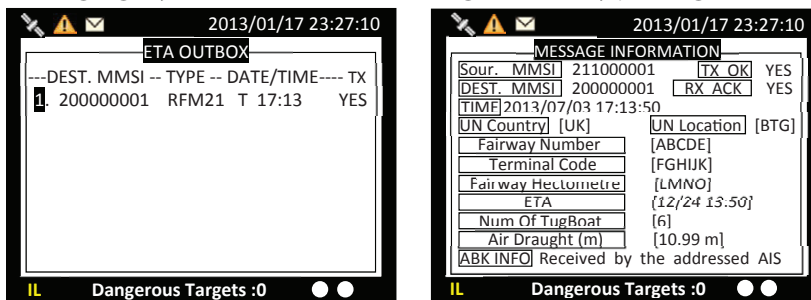

ETA outbox and message information

Create ETA message

For more information about ETA settings, please refer to page 48.

In this submenu users can compose ETA (RFM21) message. By entering into the submenu, users will be prompted to select the addressee from the target list. Here you can either pick the addressee from the list or press ESC to leave the target list and enter the MMSI number manually.

TX CHANNEL gives you the option to send the message through channel A, B or Alternate. By Alternate, which is the default option, the system will select the channel automatically.

After ETA (RFM21) transmitted, if no RTA (RFM22) is received within 15 minutes, transponder will transmit ETA (RFM21).

 After the addressee is selected, you can configure the ETA message.
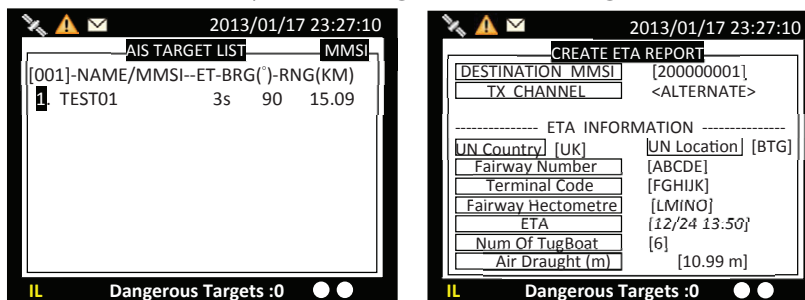

Target selection and ETA report

Use the knob to select a message and press the knob to display message content.

POB Outbox

The submenu displays log of sent Number of person on board (RFM55/IFM16) messages. The IMO version sends the total number of persons on board as a binary message with international IFM16.

The Inland (IWW) version sends a message with number of crew, personnel and passengers as a binary message with inland branch RFM55.
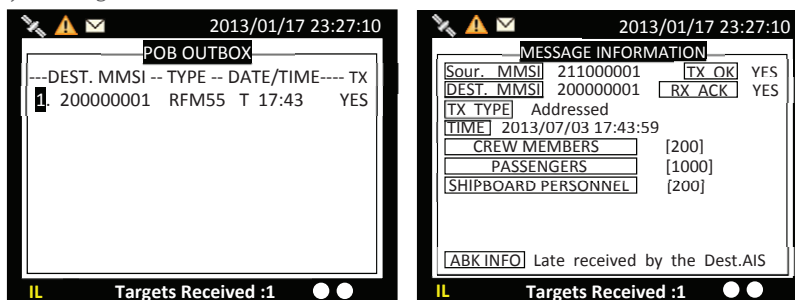

POB outbox and POB message information

Use the knob to select a message and press the knob to display message content.

Create POB message

In this submenu users can compose number of person on board (RFM55/IFM16) messages. Number of person onboard can be configured in Inland Setting 0.

By entering into the submenu, users will be prompted to select the addressee from the target list. Here you can either pick the addressee from the list or press ESC to leave the target list to enter the MMSI number manually or broadcast the POB message without specifying any addressee.

When "Broadcast" is selected, just omit the DESTINATION MMSI. Any entered number will be ignored.

The DATA TYPE provides the option either to send the data in RFM16 or RFM55, as described in page 37.

Tx CHANNEL gives you the option to send the message through channel A, B or Alternate. By Alternate, which is the default option, the system will select the channel automatically.

After ETA (RFM21) transmitted, if no RTA(RFM22) is received within 15 minutes, transponder will transmit ETA(RFM21).
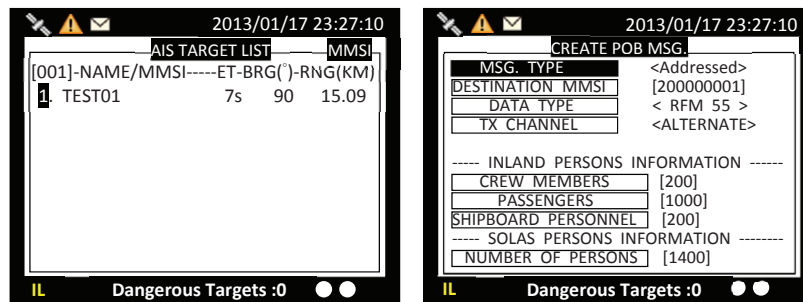

Target list and POB message content

EMMA Warning

The submenu displays log of EMMA warning (RFM23) messages. EMMA (European Multiservice Meteorological Awareness system) Information is transmitted as broadcast message from shore to ship as local weather warnings.
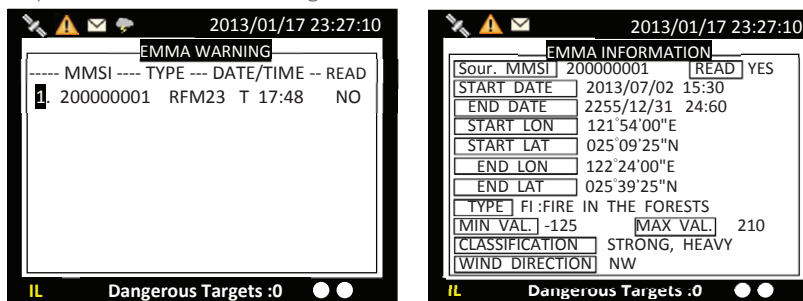

EMMA warning log and message content

Use the knob to select a message and press the knob to display message content.

Water level

This submenu displays received water level (RFM24) messages from base station to ship about local water level information.
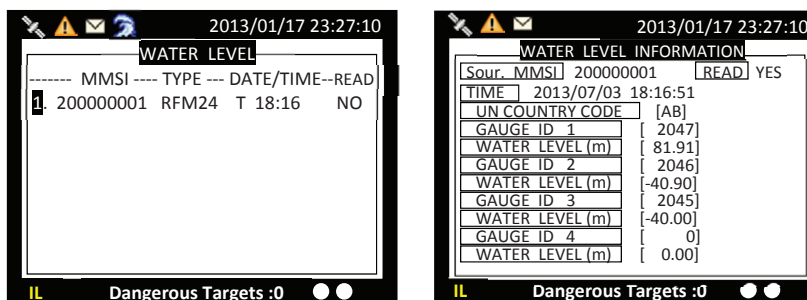

Water level log and message content

Use the knob to select a message and press the knob to display message content.

Navigation status
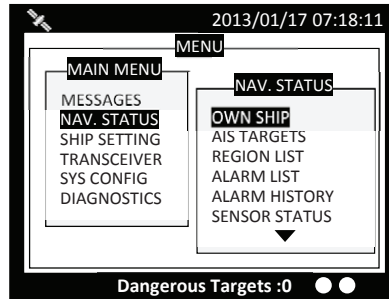

Own ship

This option displays the full information on your ship, including both dynamic and static data.

Turn the knob to change between dynamic and static information.

Static data and dynamic data
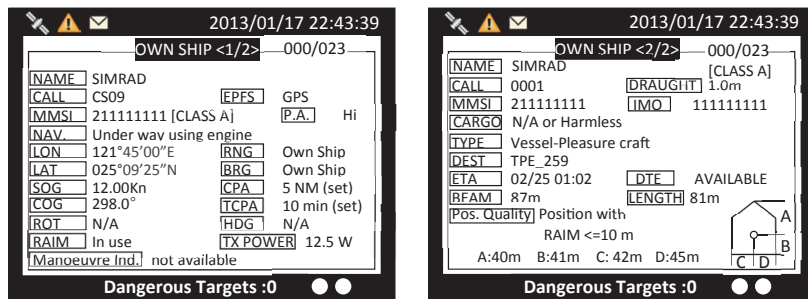

Static data and dynamic data

Inland vessel information

This option displays the full information on your ship, including both dynamic and static data.

Turn the knob to change between dynamic and static information.
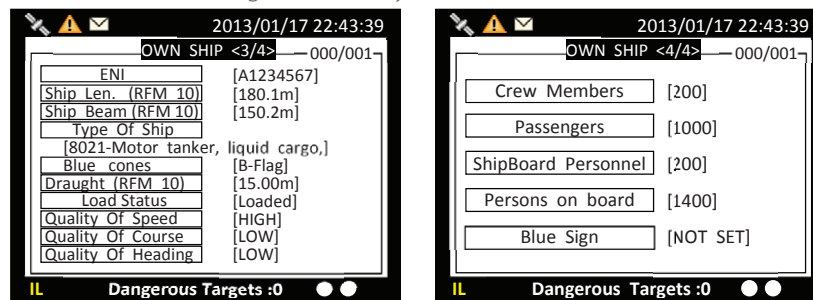

Additional inland vessel information

AIS targets

This option displays all received AIS information of other vessels including dynamic and static information. Press the knob to select an AIS target and then press the knob to go through dynamic and static information of the selected vessel. There are two pages of ship details for SOLAS mode and another two pages for inland mode.
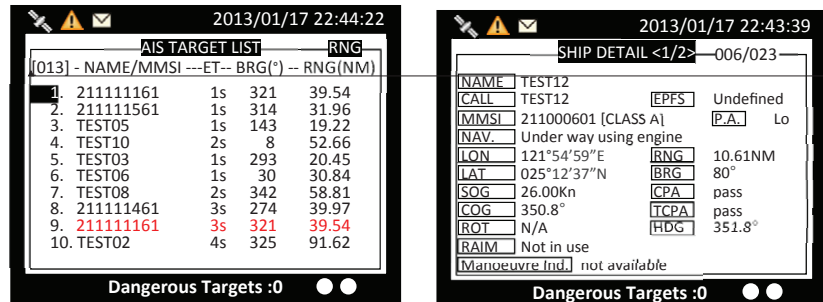

AIS targets and details

Turn the knob to continue reading the dynamic and static information of the selected vessel.

Additional inland information is available under inland mode.
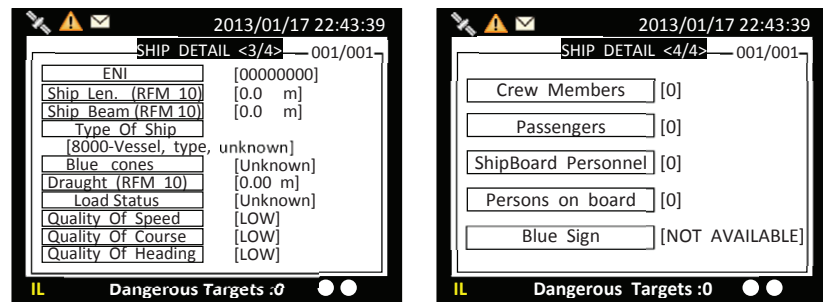

Ship's inland information

Adding friend ship

In the list, press FUNC button will open the pop-up window with the question whether the selected vessel should be added to your FRIEND SHIP list, or to sort the list according to vessels' MMSI, distance, or direction.
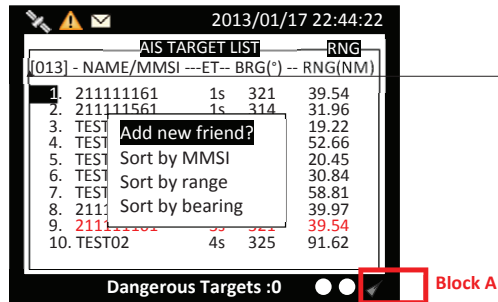

Adding friend ship

In the screenshot above, the block A indicates the current sorting method.

	By MMSI, in ascending order
	By direction, in ascending order
	By distance, in ascending order

Region list

The region list displays all saved region areas. Turn the knob to traverse the list. Press the knob enables you to read the highlighted region information.
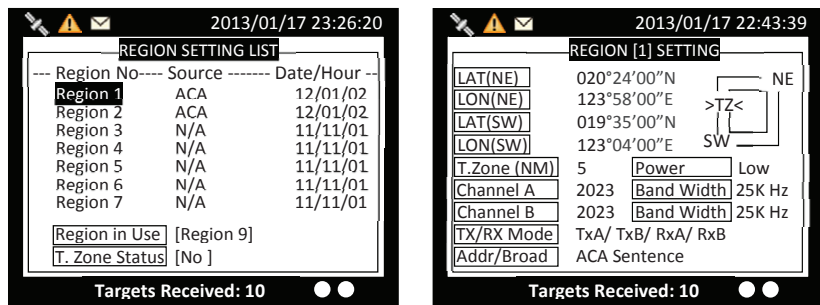

Region list and region setting

Editing existing region content

You can modify the region area setting by pressing FUNC button at the region information page. Use the scroll wheel to scroll to the field to edit, then press the knob to enter the value.
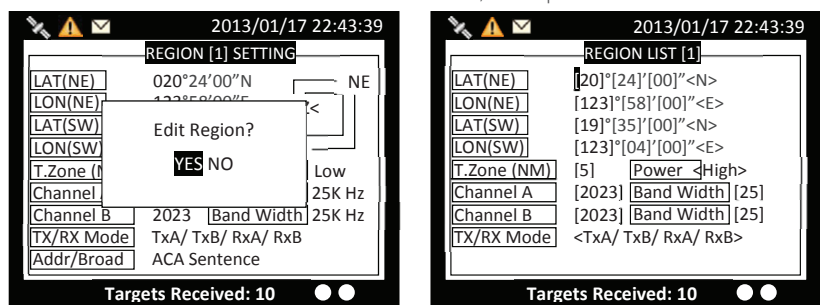

Modify region content

To save the settings, press MENU or ESC and the system will ask whether the changes should be saved. Select OK to save or CANCEL to discard and return to main menu. If the region information is unchangeable, saving does not change the original information.

Alarm list

V5035 features SART/MOB alarm that can appear any time during operation. When SART/MOB message is received, the ⊗ icon will appear in the status bar with beeping sounds from the beeper. Press any button to stop the sound. An example of an alarm message is shown below.
SART/MOB message alert

There are 2 ways to access the Alarm list: either through Main Menu/Navigation Status/Alarm list or with the hot key by holding the ESC key for 3 seconds and the unit will enter the Alarm List screen.

The list shows all current AIS alarms and their status. Use the scroll wheel to navigate the list. You can acknowledge (ACK) the alarm message either by pressing FUNC or by pressing the knob. The system will ask for confirmation if the chosen alarm should be acknowledged. If the alarm message has not yet acknowledged, an indication icon ⚠ will appear on left upper corner till all acknowledgement are made.

The transponder performs a function self-check continuously. If a self-check fails an alarm will occur. The Appendix B shows all possible alarm scenarios.

However, the following 4 alarms require user´s immediate attention and will be displayed directly on the Transmission and Reception Bar:

- Tx malfunction: transmission function fails
- Antenna VSWR exceeds limit: VHF antenna malfunction
- NavStatus incorrect:
- Improper MMSI: no valid MMSI
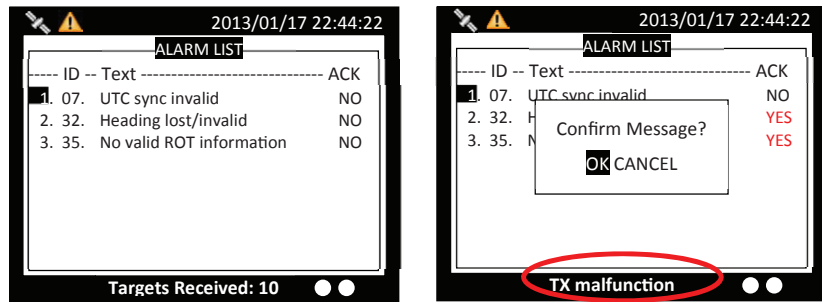

Alarm list and acknowledgement

Alarm history

This submenu lists all recorded alarm and its time of occurrences.
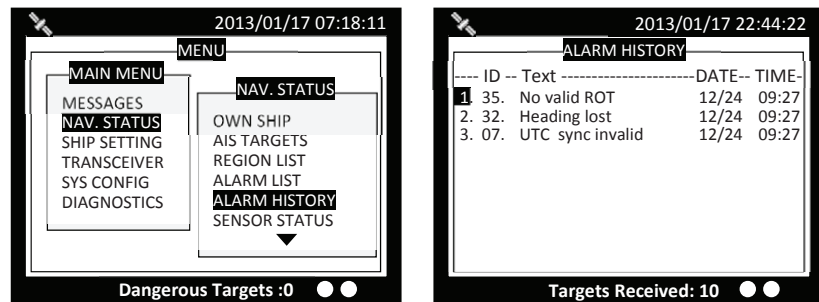

Alarm history

Sensor status

Display sensor statuses:

Sensor	Status
POSITION STATUS	EXT. DGNSS / INT. DGNSS MSG.17 / EXT. GNSS / INT. GNSS / NO GPS
POSITION QUALITY	No position Manual position Dead reckoning position valid position with no time stamp Position > 10m Position with RAIM > 10 m Position <= 10 m Position with RAIM <= 10 m Outdated position > 200 m
UTC STATUS	VALID / LOST
COG STATUS	INT. COG / EXT. COG / LOST
SOG STATUS	INT. SOG / EXT. SOG / LOST
HEADING STATUS	VALID / LOST
ROT STATUS	VALID / OTHER ROT / LOST
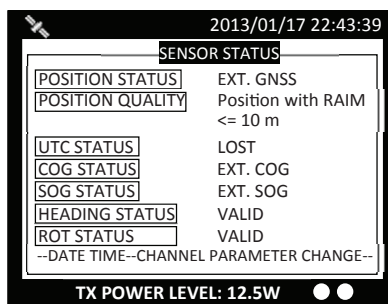

Sensor status

Dangerous list

With the setup of closest point of approach (CPA) and time to CPA (TCPA) (refer to 4.8.3), this submenu provides an efficient way to monitor vessels with insufficient CPA and TCPA. The dangerous targets can also be observed on coastal and radar view.

Turn the scroll wheel to navigate the list and press the knob to read information of the selected vessel. Turn the knob again to go the second page for more details.
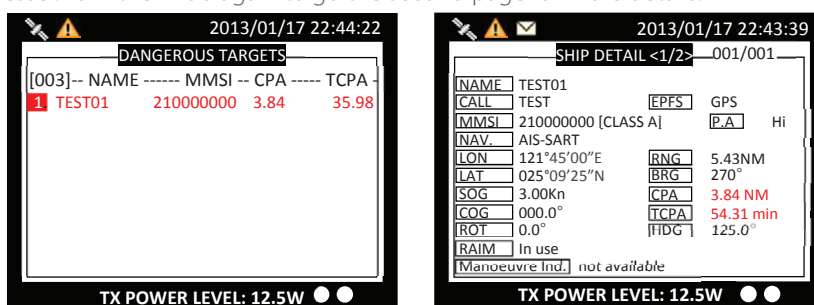

Dangerous list and vessel details

MOB list

With the setup of MOB list, MOB can be easily traced by the person's name not just by the MMSI number on the MOB device. This submenu enables adding, removing, or modifying of MOB list entries.
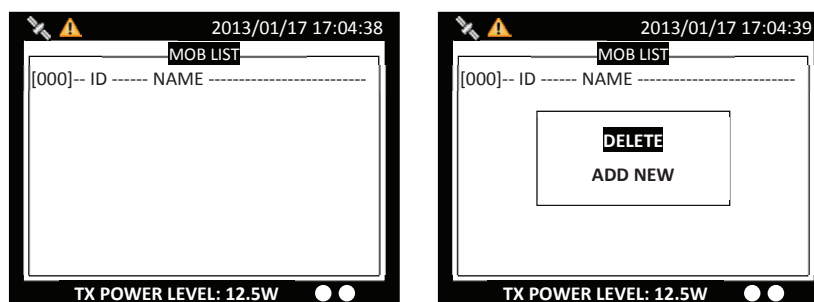

In the list, press FUNC button will open the pop-up window with the question whether the selected entry should be deleted, or to add a new entry to the list. After MMSI number and name are assigned, press MENU or ESC to save or leave without saving.

The existing entry can be modified by pressing the knob to enter the text edit mode. Use the knob to edit the list and press MENU or ESC to save or leave without saving.

Friend Ships

The users can easily recognize the friend ships on coastal view and radar view, when the list of friend ships is set up. This submenu allows you to add, delete and edit the list of all registered friend ships.
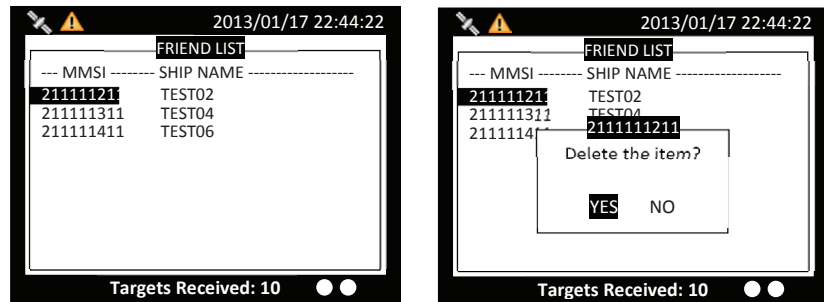

List of friend ships

In the list, press FUNC button will open the pop-up window with the question whether the selected vessel should be deleted. After MMSI number and name are assigned, press MENU or ESC to save or leave without saving.

The existing entry can be modified by pressing the knob to enter the text edit mode. Use the knob to edit the list and press MENU or ESC to save or leave without saving.

Ship Setting

This menu list provides access to settings that are required during installation of the transponder. There are a total of 5 submenus.
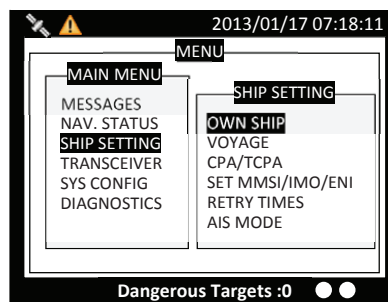

Own ship

This section is password protected and can only be accessed using the password (page 51).

The following information about the vessel should be correctly set up by installation prior to operation:

- Call Sign - Vessel radio call sign (limited to 7 characters)
- Ship Name - limited to 20 characters
- Ship Type – use the scroll wheel to select the type of vessel from the list
- Position of internal GPS antenna - giving the location of the GNSS antenna connected to the AIS transceiver (Internal GPS)
- Position of external GPS antenna - giving the location of the GNSS antenna connected to any external position source connected to the AIS transceiver
- Length and Beam – measured length and width of the ship (inland mode only)
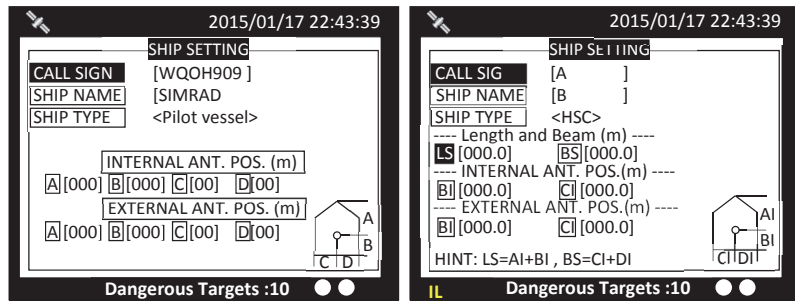

Ship setting in SOLAS mode (left) and inland mode (right)

➔ **Note:** if Ship Type is Tanker, by regulation, whenever the ship navigation status is "Moored", the transponder's transmission power is automatically changed to 1W for safety measures.

Voyage

SOLAS mode
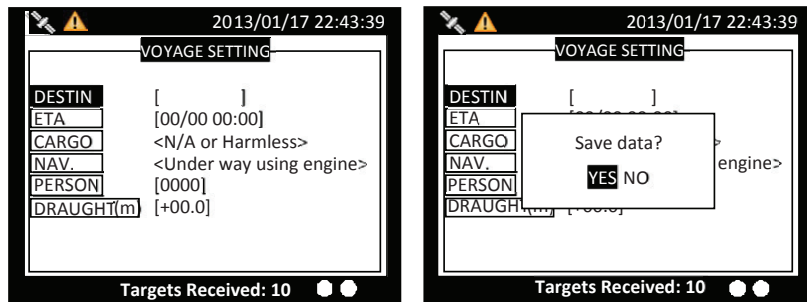

SOLAS voyage setting

In this submenu the following navigational information can be configured:

- Destination – Ship's next destination port (limited to 20 characters)
- ETA - Estimated time / date of arrival at destination (using UTC time)
- Cargo – use the scroll wheel to select the suitable status from the list
- Navigational status – use the scroll wheel to select the suitable status from the list
- Person – the number of person on board
- Draught - Maximum present static draught to the nearest 1/10th of a meter

To save the settings, press MENU or ESC and the system will ask whether the changes should be saved. Select OK to save or CANCEL to discard and return to main menu.

Inland Mode

Under inland mode, voyage configuration does not include PERSON setting. To set up number of person on board, please go to INLAND SETTING/NUMBER OF PERSON.

By CONVOY EXTENSION, the dimensions of the vessel are set to the maximum rectangular size of the convoy when operating in inland AIS mode.
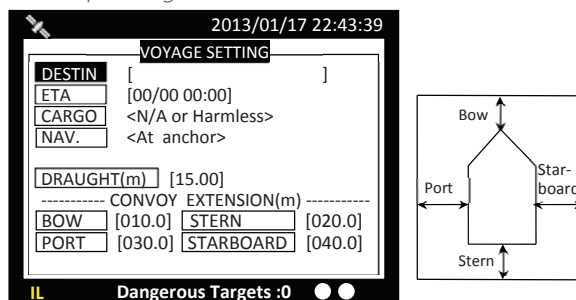

Inland voyage setting

CPA/TCPA

In this submenu the closest point of approach (CPA) and time to CPA (TCPA) can be set. The vessels with insufficient CPA and TCPA will be displayed in the dangerous list (page 43) and on coastal and radar view.

- CPA – in nautical miles
- TCPA – in minutes
- Alarm – when alarm is connected to the transponder via junction box, you can choose whether alarm should be activated when a dangerous target appears.
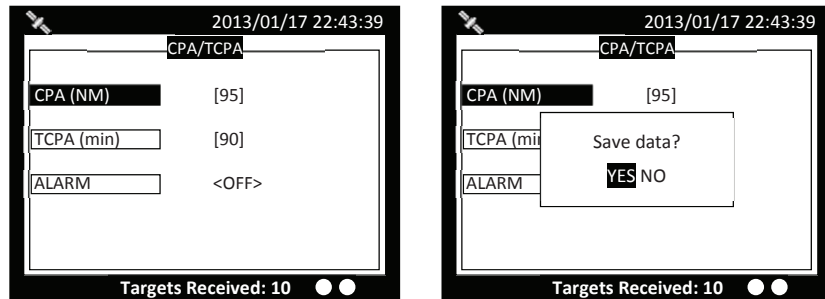

CPA/TCPA

To save the settings, press MENU or ESC and the system will ask whether the changes should be saved. Select OK to save or CANCEL to discard and return to main menu.

Set MMSI/IMO/ENI

This section is password protected and can only be accessed using the password (page 51).

SOLAS Mode

This submenu provides access to set MMSI and IMO. Use the knob to choose the menu option either MMSI or IMO.
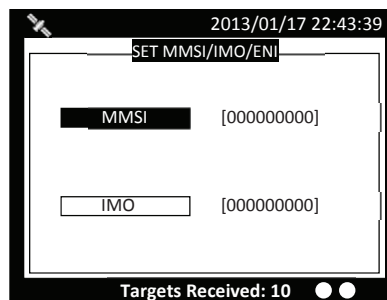

Set MMSI/IMO/ENI

For SOLAS vessels, the MMSI number can be entered in a valid range which is indicated on the input screen. To save the settings, press MENU or ESC and the system will ask whether the changes should be saved. Select OK to save or CANCEL to discard and return to main menu.
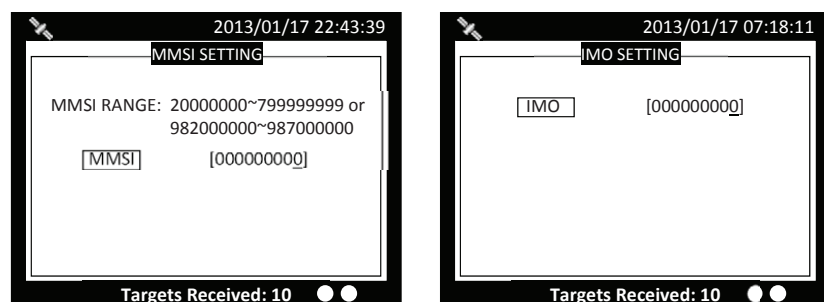

MMSI/IMO setting

Inland mode

The ENI (unique European Vessel Identification Number) setting is only available under inland mode, while IMO setting is not accessible in this mode. The procedure to set/change MMSI number is same as described in "SOLAS Mode" on page 46.
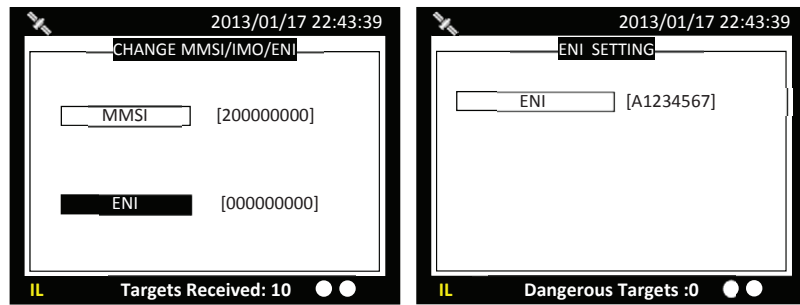

ENI setting

When setting is done, press ESC to exit.

Retry Times

In order to resend messages when the transmitted Message 6 or Message 12 receives no acknowledgement of Message 7 or Message 13, you can set how many times you want the system to resend messages. The options are 0 (no repeat), 1 (repeat one time), 2 (repeat 2 times) or 3 (repeat 3 times).

AIS Mode

Here you can configure the transponder to operate in SOLAS or INLAND mode. Each mode has some specific submenu and menu options.
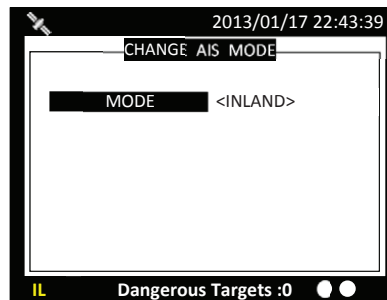

Switching between SOLAS and inland modes

Inland setting

All boat information inland setting can be found under this menu.
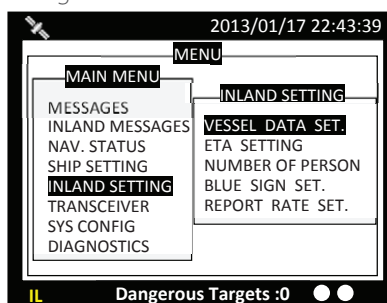

Submenus under inland setting

Vessel Data Setting

Inland related vessel data can be set in this submenu:

- ERI Ship Type – ERI classification code.
- Blue Cones - The number of blue cones or blue flag status for the cargo (1, 2 or 3 blue cones, or blue flag).
- Load Status - 'Loaded', 'Unloaded', 'Unknown'

- Quality of Speed, Course and heading information - will be shown as 'high' when the target vessel is using an approved sensor to generate this data, or low if the data is derived from internal GNSS only.
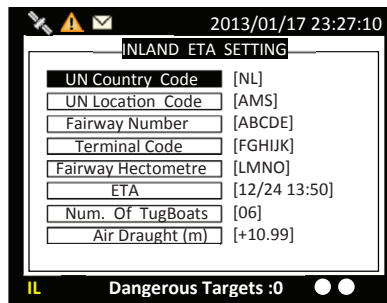

Inland related vessel data

ETA setting

This menu provides ETA (RFM21) related setting:

- UN country and location code - the voyage destination should be entered using UN country (2 characters) and location codes (3 characters) where possible.
- Fairway Number, Terminal Code & Fairway Hectometre: each is limited to 5 characters when available
- ETA - Estimated time / date of arrival at destination (using UTC time)
- Number of Tugboats: The number of assisting tugboats (from 0 to 6 or unknown)
- Air Draught: The air draught of the vessel to the nearest centimeter.
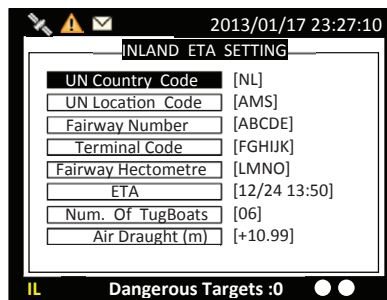

Inland ETA setting

To save the settings, press MENU or ESC and the system will ask whether the changes should be saved. Select OK to save or CANCEL to discard and return to main menu.

Number of Person

This submenu provides Number of Person (RFM55) setting:

The number of crew (0 to 254 or unknown), passengers (0 to 8190 or unknown) and other shipboard personnel (0 to 254 or unknown).
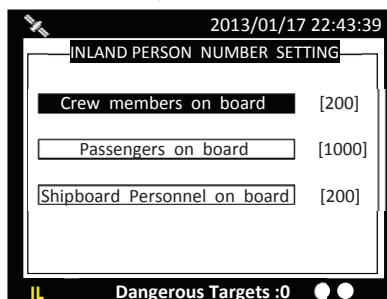

Number of person setting

Blue sign setting

Blue Sign information helps you recognize the approaching vessels in your inland waterway area. A 'blue sign' switch may optionally be connected to the AIS transceiver during installation. This setting enables or disables the blue sign switch on the Junction Box.
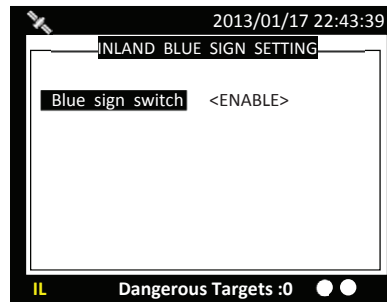

Blue sign switch setting

Report Rate Setting

Set V5035's report rate. Selectable report rates are AUTO/ 10 SEC./ 5 SEC./ 2 SEC..

Transceiver

This section is password protected and can only be accessed using the password (page 51).

The submenu allows the users to switch on or off the transmission and change the supplied voltage of the GPS antenna between 3.3V and 5V. It also enables to switch the transmission power between 12.5W, as "normal", and 1W.
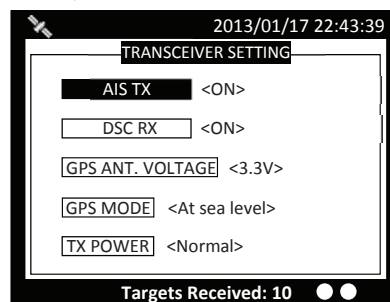

For inland vessels that operate at altitude higher than 500 meters, the transponder needs GPS Mode set to "Altitude higher than 500m" for better GPS positioning performance.

To save the settings, press MENU or ESC and the system will ask whether the changes should be saved. Select OK to save or CANCEL to discard and return to main menu.

Sys Config

System configuration provides access to user configurable preferences for V5035. All user settings are stored within the transponder and will be maintained if the power supply is switched off.

After the setting is done, press MENU or ESC and the system will ask whether the changes should be saved. Select OK to save or CANCEL to discard and return to main menu.
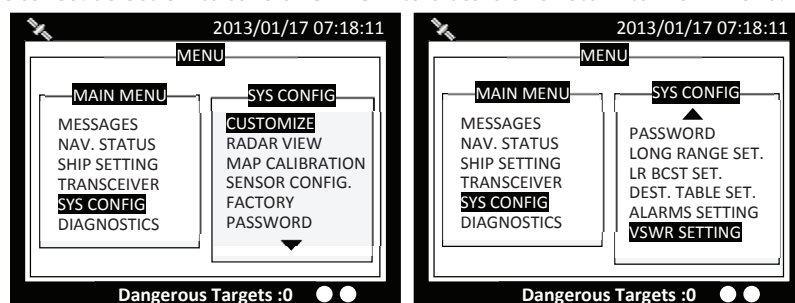

System configuration

Customize

Customize provides personalization settings:

* Dimmer Level - brightness setting from 1 (low) to 100 (high)
* Colour mode - brightness and contrast adjustment for the LCD display along with selection of day or night operating mode. In night mode the display colours are inverted (light text on a dark background).
* Key time-out - time to leave menu screen and switch back to coastal view
* Language - available: select the user interface language from the available language options.
* Key Beep – turn on or off the key beep
* Time Zone – set the time zone
* SART test mode – hide or display the SART test message
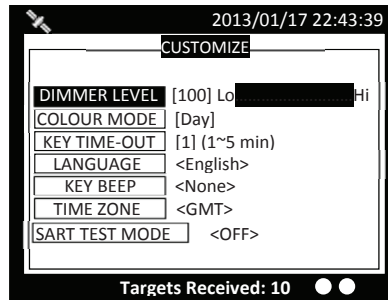

Customize

Radar View

This setting provides user the ability to center the radar map on given coordinates.

Turn knob to choose either latitude or longitude and press knob to confirm. Once pressed, turn knob to choose a parameter and press knob again to enter input mode. When finished, press ESC to return to the level before. Continue these procedures till all settings are set.
Radar view setting

In this view setting, RADAR VIEW ORIENTATION has NORTH UP/ COURSE UP / HEAD UP view modes.

Map Calibration

This setting offers user functions to calibrate map data. Turn knob to select either latitude or longitude to offset. Press knob to enter input mode. Turn knob to select an offset value. Once finished press ESC to return to the previous level to continue the setting.
Map calibration

Sensor config

This section is password protected and can only be accessed using the password (page 51).

Sensor Configuration provides user to set port baud rates. Turn knob to select a port to modify and press knob to change the specified port baud rate. Turn knob to change the desired rate between 4800/9600/19200/38400. When finished, press knob again to return to the previous level.
Baud rate setting

Factory

This section is password protected and can only be accessed using the password (page 51).

Press knob to confirm your choice and the following settings will be restored to their original value: MOB/Friend ship List, destination list, time zone, language, dimmer, CPA/TCPA and system password.
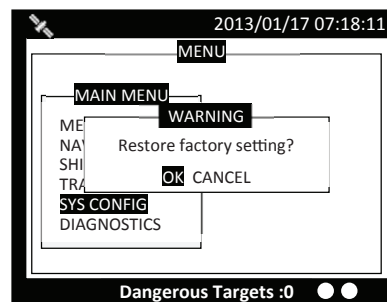

Factory setting

Password

This submenu enables users to change user password. Certain important information stored within the transponder can only be changed with the password. Password is required for the access of the following sections:

- Own Ship (page 39) – contains information about call sign, vessel name and ship type
- Set MMSI/IMO/ENI (page 46) – contains information about MMSI and IMO number
- Transceiver (page 49) – enables the option to activate/deactivate AIS transmission
- Sensor Configuration (page 51) – about baud rate configuration of sensors
- Factory (page 51) – restoration of factory setting
- Alarms Setting (page 53)
- VSWR Setting (page 53)

⚠ (Default password: "0000")

Use the knob in the order of "OLD PASSWORD", "NEW PASSWORD", "CONFIRM NEW PASS-WORD". Repeat till all four values are entered. To save the settings, press MENU or ESC and the

system will ask whether the changes should be saved. Select OK to save or CANCEL to discard and return to main menu.

Alarm setting

This menu is password protected. The menu can be used to enable or disable ALR 25/32/35 sentence. For instance, if an ALR sentence is disabled, the corresponding alarm would not activate.
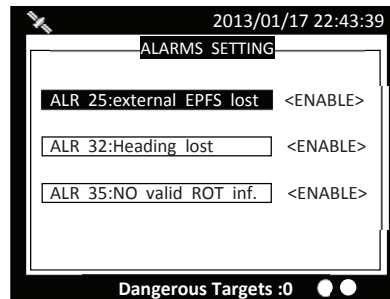

Alarm setting for ALR 25/32/35

VSWR Setting

The VSWR setting function allows the fine-adjustment of VSWR threshold according to the cable length and VHF antenna characteristics. This function is password protected (page 51) and should be performed by a qualified service partner or dealer.
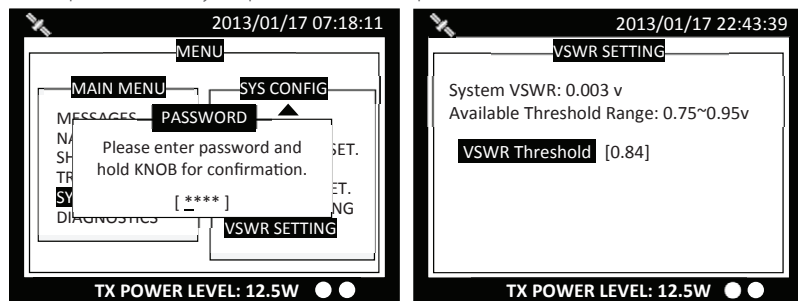

Diagnostics

This submenu provides users to check system statuses. There are a total of 8 check options.
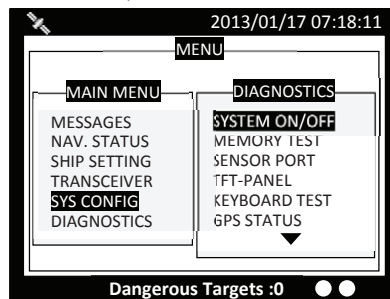

System On/Off: This option provides activation history (any power-off session less than 15 minutes would not be registered in the history).

Memory Test: This option provides memory testing on the unit.

Sensor Port: This option provides an overview of baud rates on all ports and status information.

TFT-Panel: This option provides color information on the monitor.

Keyboard Test: This option provides keyboard testing. Pressing button during testing, a corresponding button on the screen will response. After all buttons are tested, a message will indicate. Press knob for OK to exit. To quit test without completing, wait for 30 seconds and the system will return to the main menu.
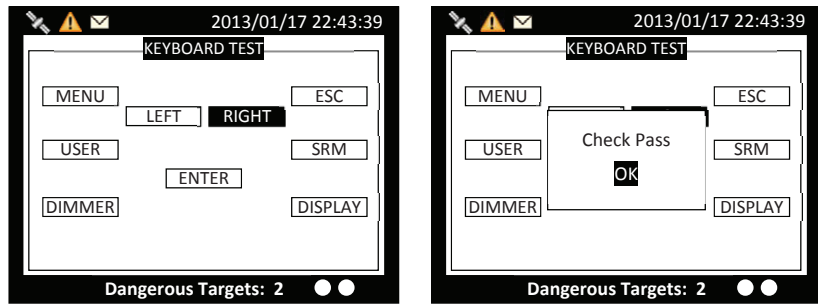

Keyboard test

GPS Status: This option provides GPS satellite status information. Green indicates satellite being used for GPS fix. Red indicates satellite not being used.

GPS satellite location signal

Own Ship information signal.

Strength of GPS satellite signal
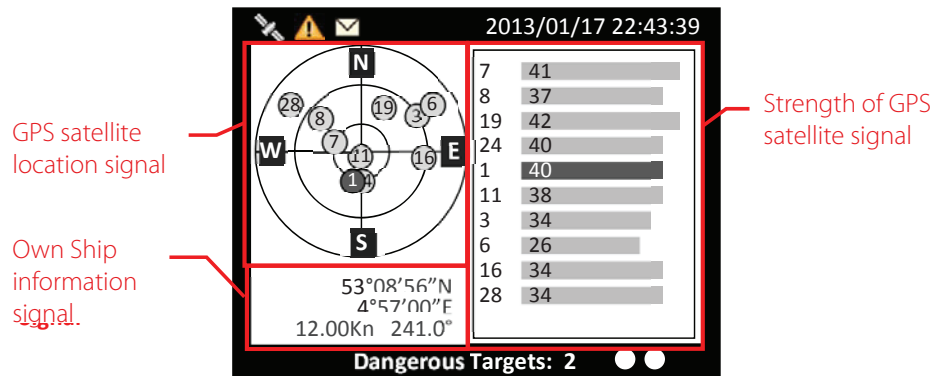

GPS status

Transceiver: this option provides user to view the frequencies and status. When finished, press ESC to exit.
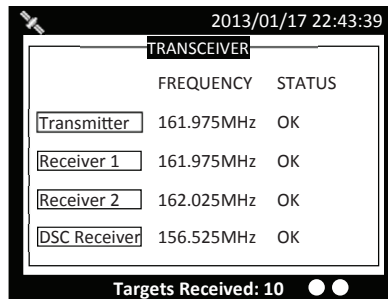

Transceiver

Communication Test: Communication can be tested. The procedure starts by transmitting Message 10 to an addressed Class A MMSI. The addressee MMSI, once received Message 10, will return Message 11. The test is then complete when the transponder successfully receives the Message 11.
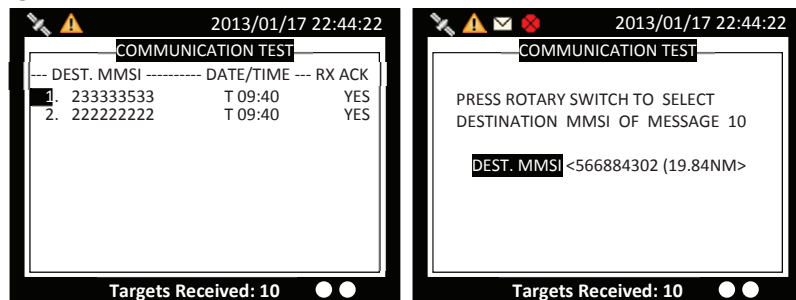

Communication test

Press the FUNC button to start the communication test. Following the on-screen instruction by turn the knob to select a class A MMSI number. Then press MENU, ESC or FUNC and click

"OK" to start the transmission of Message 10. Only Class A units with GPS fix are listed and eligible for communication testing. The left screen below indicates no valid Class A targets found.
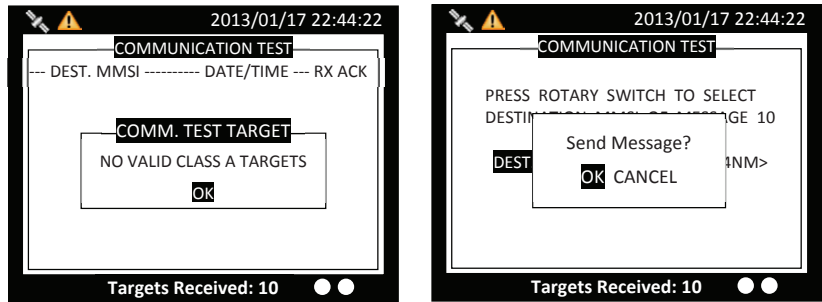

No valid targets

After pressing the knob, turn the knob to selected destination MMSI for testing. The destination MMSI numbers are the nearest Class A targets found close to the Class A unit. Press ESC or MENU to pick selection and the unit will prompt to confirm message sending. Select OK to proceed testing.

Panel Test

In the submenu users can test the brightness of the screen.

Press "FUNC" to switch the white cube between different sizes. Rotate the scroll wheel quickly to test different stages of brightness. To exit the function, press "MENU" or "ESC".

Test with size and brightness

Version

Provide model name, hardware information, delivered firmware version on the unit, etc. When finished, press ESC to exit.

Weight	$\leq$ 1.16 kg

Pilot plug

Cable length	2 m
Connector type	Std. Sex 206486-2

NMEA 2000 PGN information

The following table is a list of the NMEA 2000 messages supported by the V5035 unit.

The "Transmit" PGNs information includes "Own ship" + "Received AIS information from other ships". This is the reason the NMEA2000 PGN list covers both Class A and Class B related information.

Transmit

7 Troubleshooting

Use the following guide to perform simple troubleshooting in case the transponder is not function accordingly.

Symptom	Possible cause	Solution
Transponder cannot power on	Faulty connector to power Polarity reverse Power supply current too low	Check power connection Check power connection Check power supply
No picture on display	Unit not powered up Dimmer level set too low	Press power key Increase Dimmer level
No map detail	Coastline detail not active	Switch to coastline view
No GPS position data	Antenna or cabling problem	Check antenna cable and connections
No AIS transmission	MMSI not entered Transmitter disabled Power supply voltage too low	Enter MMSI number Enable transmitter Check power supply
No AIS target	VHF cabling problem	Check antenna cable and connections
AIS range seems too low	VHF antenna and cabling	Check VHF antenna and cable installation
Sensor ports not response	Cable installation	Check related wiring
Data port not response	Cable installation	Check related wiring

8

GN70/MX61X AIS operation

The GN70/MX610/MX612 CDU can display AIS targets provided by the V5035 AIS transponder by pressing the AIS hot key. You can zoom-out by turning the ROTARY KNOB counter-clockwise or zoom-in by turning it in clockwise direction. AIS targets can be displayed as overlay on the plotter screen. This feature is an important tool for safe travelling and collision avoidance. You need to have your own MMSI (Maritime Mobile Service Identity) number entered in the CDU to be able to receive addressed messages from AIS and DSC vessels. It is also important to have the MMSI number entered to avoid seeing your own vessel as an AIS target on the plotter. You can define alarms to notify you if an AIS target gets too close or if the target is lost.
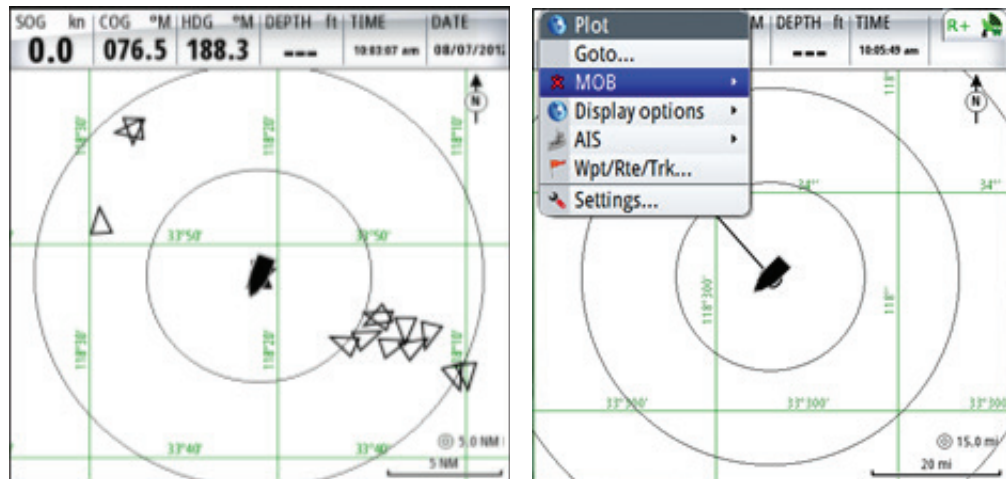

Vessels on AIS/PLOT screen

AIS Plot with Quick Menu

Target symbols

The MX610/MX612 system use the AIS target symbols shown below:

Symbol	Description	
	Sleeping AIS target (not moving or at anchor)	
	Moving and safe AIS target with course extension line.	
	Dangerous AIS target, illustrated with bold line.	A target is defined as dangerous based on the CPA and TCPA settings. Refer to Defining dangerous vessels on page 44.
	Lost AIS target.	When no signals have been received within a time limit a target will be defined as lost. The target symbol represents the last valid position of the target before the reception of data was lost.

Viewing information about AIS targets

AIS target list

The list of AIS targets can be displayed by using the procedure below:

1. Press the AIS hot key.
2. Press the MENU key to bring up the quick menu.
3. The Vessel info menu will be highlighted, press ENT.
4. The list of AIS vessels will show.
5. Scroll to the desired AIS target, press ENT to show the vessel details
6. Press the ENT key to close.
7. To exit, press the CLR a few times or any hot key.
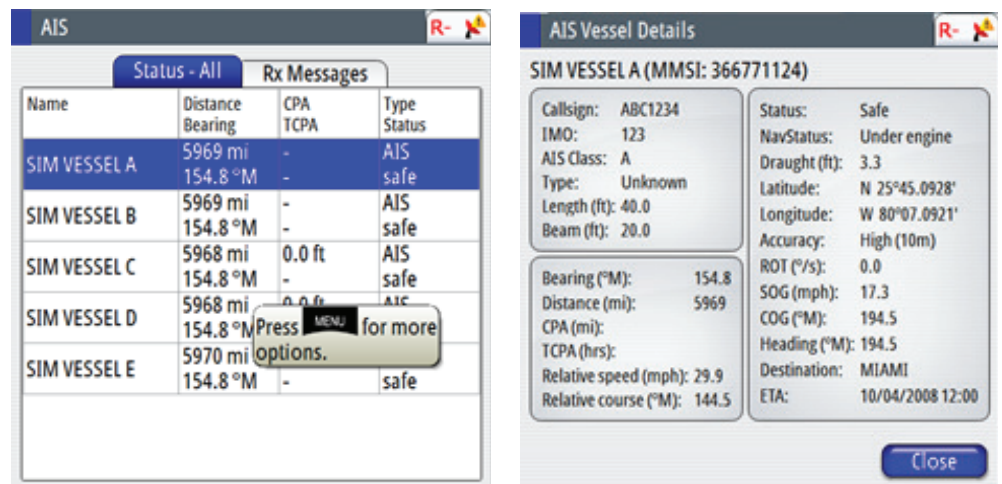

Vessel Filter

AIS targets displayed can be filtered to hide all targets or safe targets. It can also filter out targets that are further away or traveling at a certain speed:

1. Press the AIS hot key.
2. Press the MENU key to bring up the quick menu.
3. Scroll to Vessels Filter… menu, press ENT.
4. Select desired action by scrolling to it and pressing ENT to leave a check mark.
5. Scroll to SAVE, press ENT.
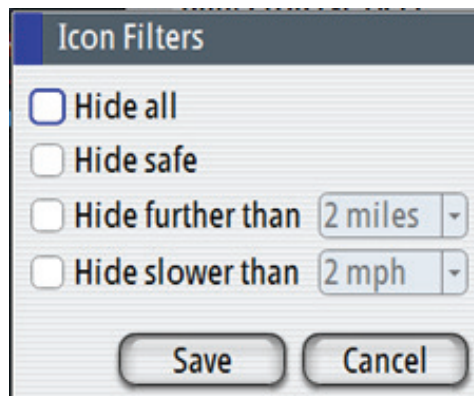

Vessel alarms

You can define several alarms to alert you if a target comes within predefined range limits, or if a target is lost.

Alarm ID	Description
Dangerous vessel	Controls whether an alarm shall be activated when a vessel comes within the predefined CPA or TCPA. See Defining dangerous vessels on page 44. Note: The check box controls whether the alarm pop-up box is displayed and if the siren will sound. The CPA and TCPA define when a vessel is dangerous regardless of the enabled/disabled state.
AIS vessel lost	Sets the range for lost vessels. If a vessel is lost within this range this will trigger an alarm
Vessel message	Controls whether an alarm shall be activated when a message is received from an AIS target

→ **Note:** Please refer to the GN70/MX61x User manual for more AIS operation.

Appendix A

IEC 61162-2 Data Interface

The V5035 Class A AIS Transponder provides 2 types of IEC 61162-2 data interfaces for user applications. The first interface type includes 3 input-only sensor data ports and the second interface type includes 4 bidirectional input/output ports. Data port for each interface type will be described in the following section below.

Sensor Data Input Ports

The schematic of input-only sensor data port is shown in Figure A1. The schematic includes a standard V.11 transceiver IC (Texas Instruments SN65176B) combined with high speed photo-coupler which are used as the main components to receive external data. The transceiver IC is isolated from external input. To avoid signal reflection, the transceiver IC has an optional built-in 120Ω loop termination, which is selectable by the dip-switch on the junction box and the switch should be set to on position when connecting external data source with long cable. All sensor data-input ports are isolated from one another and are also isolated from internal power supply. The input impedance on A/B wires is greater than 12 KΩ and the levels on the A/B wires are defined in the following:

- Logic low input: A-B < -0.2V

- Logic high input: A-B > +0.2V
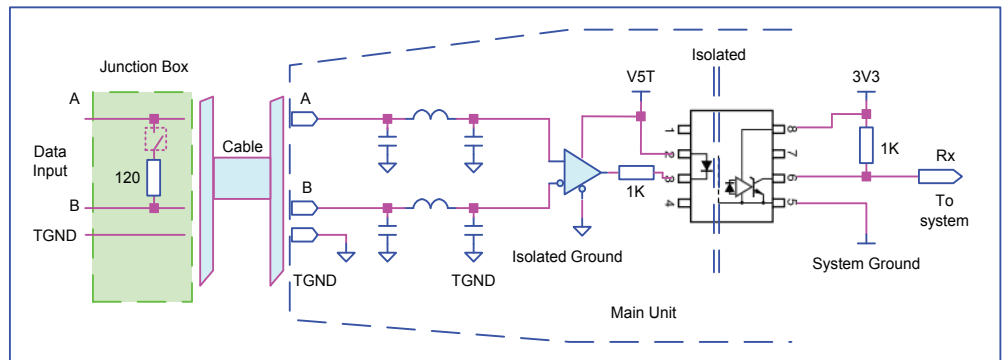

Schematic of sensor data input port.

Bidirectional Data Ports

The schematic of bidirectional data port is shown in Figure A2. The schematics includes an isolated full duplex RS-485 transceiver IC (Texas Instrument ISO3080) which is used as the main component to handle both data input and output from external data source. The transceiver IC is isolated from external input. To avoid signal reflection, the transceiver IC has an optional built-in 120Ω loop termination, which is selectable by the dip-switch on the junction box and the switch should be set to on position when connecting external data source with long cable. All bidirectional data ports are isolated from one another and are also isolated from internal power supply. The transceiver internal power supply is fully isolated from the external power supply.
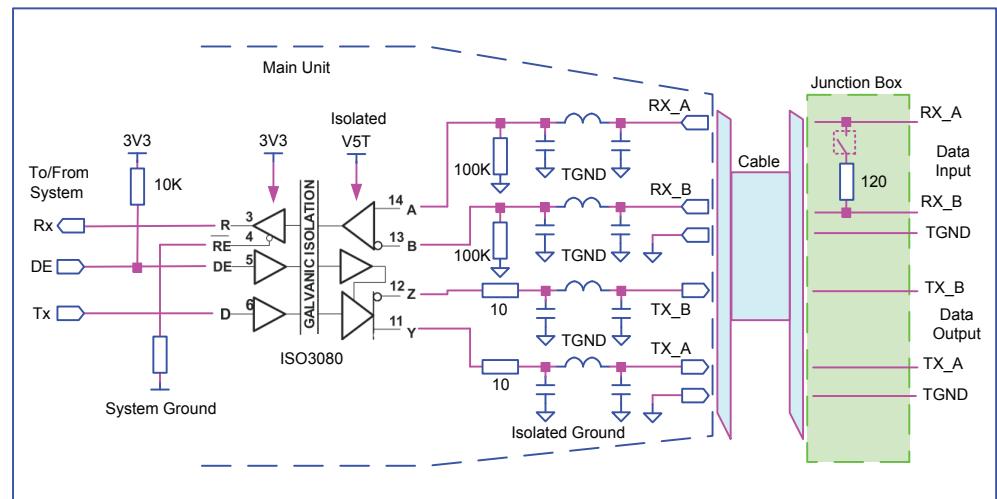

Schematic of bidirectional data port

The output driver capability of bidirectional data port can provide a maximum of 60mA, and the minimum differential output swing under 100 Ω load can be 2.3V.

A and B Signal Lines

Refer to sections Sensor Data Input Ports (previous page) and Bidirectional Data Ports above.

Output Driver

The output driver capability of bi-direction data port can provide maximum 60mA, and the minimum differential output swing under 100 ohm load can be 2.3V.

Input Load

Refer to sections Sensor Data Input Ports (previous page) and Bidirectional Data Ports above.

Hardware Input/Output Circuit

Refer to sections Sensor Data Input Ports (previous page) and Bidirectional Data Ports above.

Transmission interval

Sentence	Interval
VDO	Once a second
ALR (active)	Once every thirty seconds
ALR (inactive)	Once every sixty seconds

Interpretation of Input Sentences

ABM – AIS Addressed Binary and Safety Related Message

This sentence supports ITU-R M.1371 Messages 6, 12, 25, 26 and provides an external application with a means to exchange data via an AIS transponder.

!--ABM,x,x,x,xxxxxxxxx,x,xx,s—s,x*hh<CR><LF>			
Field No.	Format	Description	Remark
1	x	Total number of sentences needed to transfer the message	
2	x	Sentence number	
3	x	Sequential message identifier	
4	xxxxxxxxx	The MMSI of the destination AIS unit for the ITU-R M.1371 message	
5	x	AIS channel for broadcast of the radio message	
6	xx	ITU-R M.1371 message ID	
7	s—s	Encapsulated data	
8	x	Number of fill-bits	

ACA – AIS Channel Assignment Message

An AIS device can receive regional channel management information.

$--ACA,x,llll.ll,a,yyyyy.yy,a,llll.ll,a,yyyyy.yy,a,x,xxxx,x,xxxx,x,x,x,a,x,hhmmss.ss*hh<CR><LF>			
Field No.	**Format**	**Description**	**Remark**
1	x	Sequence Number	
2	llll.ll,a	Region northeast corner latitude – N/S	
3	yyyyy.yy,a	Region northeast corner longitude – E/W	
4	llll.ll,a	Region southwest corner latitude – N/S	
5	yyyyy.yy,a	Region southwest corner longitude – E/W	
6	x	Transition zone size	
7	xxxx	Channel A	
8	x	Channel A bandwidth	
9	xxxx	Channel B	
10	x	Channel B bandwidth	
11	x	Tx/Rx mode control	
12	x	Power level control	
13	a	Information source	
14	x	In-use flag	
15	hhmmss.ss	Time of "in use" change	

ACK – Acknowledge Alarm

This sentence is used to acknowledge an alarm condition reported by a device.

$--ACK,xxx*hh<CR><LF>			
Field No.	**Format**	**Description**	**Remark**
1	xxx	Unique alarm number (identifier) at alarm source	

AIQ - Query Sentence

This sentence is used to inquire AIS sentence information.

$--AIQ,c—c*hh<CR><LF>			
Field No.	**Format**	**Description**	**Remark**
1	c—c	Support query sentence of ACA, EPV, SSD, VSD, TXT.	

AIR – AIS Interrogation Request

This sentence supports ITU-R M.1371 messages 15 and 10. It provides an external application with the means to initiate requests for specific ITU-R M.1371 messages from AIS unit.

$--AIR,xxxxxxxxx,x.x,x,x.x,x,xxxxxxxxx,x.x,x*hh<CR><LF>			
Field No.	**Format**	**Description**	**Remark**
1	xxxxxxxxx	MMSI of interrogated station 1	
2	x.x	ITU-R M.1371 message requested from station-1	
3	x	Message sub-section	ignored
4	x.x	Number of second message requested from station-1	
5	x	Message sub-section	ignored
6	xxxxxxxxx	MMSI of interrogated station-2	
7	x.x	Number of messages requested from station-2	
8	x	Message sub-section	ignored

BBM – AIS Broadcast Binary Message

This sentence supports generation of ITU-R M.1371 binary messages 8, 14, 25, and 26. This provides the application with a means to broadcast data, as defined by the application only.

Field No.	Format	Description	Remark
\!--BBM,x,x,x,x,x.x,s—s,x*hh<CR><LF>			
1	x	Total number of sentences needed to transfer the message	
2	x	Sentence number	
3	x	Sequential message identifier	
4	x	AIS channel for broadcast of the radio message	
5	x.x	ITU-R M.1371 Message ID	
6	s—s	Encapsulated data	
7	x	Number of fill-bits	

DTM – Datum Reference

Local geodetic datum and datum offsets from a reference datum.

Field No.	Format	Description	Remark
$--DTM,ccc,a,x.x,a,x.x,a, x.x,ccc*hh<CR><LF>			
1	ccc	Local datum	
2	a	Local datum subdivision code	ignored
3	x.x, a	Lat offset, min, N/S	ignored
4	x.x, a	Lon offset, min, E/W	ignored
5	x.x	Altitude offset, m	ignored
6	ccc	Reference datum	

EPV – Command or Report Equipment Property Value

Field No.	Format	Description	Remark
$--DTM,ccc,a,x.x,a,x.x,a, x.x,ccc*hh<CR><LF>			
1	a	Sentence status flag	
2	cc	Destination equipment type	
3	c--c	Unique identifier	
4	x.x	Property identifier	
5	c--c	Value of property to be set	

GBS – GNSS Satellite Fault Detection

This sentence is used to support receiver autonomous integrity monitoring (RAIM).

Field No.	Format	Description	Remark
$--GBS, hhmmss.ss, x.x, x.x, x.x, xx, x.x, x.x, x.x *hh <CR><LF>			
1	hhmmss.ss	UTC time of the GGA or GNS fix associated with this sentence	
2	x.x	Expected error in latitude	
3	x.x	Expected error in longitude	
4	x.x	Expected error in altitude	ignored
5	xx	ID number of most likely failed satellite	ignored
6	x.x	Probability of missed detection for most likely failed satellite	ignored
7	x.x	Estimate of bias on most likely failed satellite	ignored
8	x.x	Standard deviation of bias estimate	ignored

GGA – Global positioning system (GPS) fix data

Time, position and fix-related data for a GPS receiver

$--GGA, hhmmss.ss, llll.ll, a, yyyyy.yy, a, x, xx, x.x, x.x, M, x.x, M, x.x, xxxx*hh<CR><LF>			
Field No.	**Format**	**Description**	**Remark**
1	hhmmss.ss	UTC of position	
2	llll.ll,a	Latitude N/S	
3	yyyyy.yy,a	Longitude E/W	
4	x	GPS quality indicator	ignored
5	xx	Number of satellites in use, 00-12, may be different from the number in view	ignored
6	x.x	Horizontal dilution of precision	ignored
7	x.x	Antenna altitude above/below mean sea level (geoid)	ignored
8	M	Units of antenna altitude, m	ignored
9	x.x	Geoidal separation	ignored
10	M	Units of geoidal separation,m	ignored
11	x.x	Age of differential GPS data	ignored
12	xxxx	Differential reference station ID, 0000-1023	ignored

GLL – Geographic Position – Latitude/Longitude

Latitude and longitude of vessel position, time of position fix and status

$--GLL, llll.ll, a, yyyyy.yy, a, hhmmss.ss, A, a *hh<CR><LF>			
Field No.	**Format**	**Description**	**Remark**
1	llll.ll, a	Latitude, N/S	
2	yyyyy.yy, a	Longitude, E/W	
3	hhmmss.ss	UTC of position	
4	A	Status, A=data valid V=data invalid	
5	a	Mode indicator	

GNS – GNSS Fix Data

Fix data for single or combined satellite navigation systems (GNSS). This sentence provides fix data for GPS, GLONASS, possible future satellite systems and systems combining these.

$-- GNS, hhmmss.ss, llll.ll, a, yyyyy.yy, a, c--c,xx,x.x,x.x,x.x,x.x,x.x,a *hh<CR><LF>			
Field No.	**Format**	**Description**	**Remark**
1	hhmmss.ss	UTC of position	
2	llll.ll, a	Latitude, N/S	
3	yyyyy.yy, a	Longitude, E/W	
4	c--c	Mode indicator	
5	xx	Total number of satellites in use	ignored
6	x.x	HDOP	ignored
7	x.x	Antenna altitude, m, re:mean-sea-level (geoid)	ignored
8	x.x	Geoidal separation, m	ignored
9	x.x	Age of differential data	ignored
10	x.x	Differential reference station ID	ignored
11	a	Nacigational status indicator	

GSA – GNSS DOP and Active Satellites

GNSS receiver operating mode, satellites used in the navigation solution reported by the GGA or GNS sentences and DOP values. If only GPS, GLONASS, etc. are used for the reported position solution, the talker ID is GP, GL, etc. and the DOP values pertain to the individual system.

\$--GSA, a, x, xx,xx,xx,xx,xx,xx,xx,xx,xx,xx,xx,x.x,x.x,x.x*hh<CR><LF>			
Field No.	**Format**	**Description**	**Remark**
1	a	Mode: M = manual, forced to operate in 2D or 3D mode A = automatic, allowed to automatically switch 2D/3D	
2	x	Mode: 1 = fix not available, 2 = 2D, 3 = 3D	
3	xx,xx,xx,xx,xx, xx,xx,xx,xx,xx, xx,xx	ID numbers of satellites used in solution	
4	x.x	PDOP	
5	x.x	HDOP	
6	x.x	VDOP	

HDG – Heading, Deviation and Variation

Heading (magnetic sensor reading), which if corrected for deviation will produce magnetic heading, which if offset by variation will provide true heading.

\$--HDG, x.x, x.x, a, x.x, a*hh<CR><LF>			
Field No.	**Format**	**Description**	**Remark**
1	x.x	Magnetic sensor heading, degrees	
2	x.x,a	Magnetic deviation, degrees E/W	
3	x.x,a	Magnetic variation,degrees E/W	

HDT – Heading True

Actual vessel heading in degrees true produced by any device or system producing true heading.

\$--HDT, x.x, T*hh<CR><LF>			
Field No.	**Format**	**Description**	**Remark**
1	x.x, T	Heading, degrees true	

LRF – AIS Long-Range Function

This sentence is used in both long-range interrogation requests and long-range interrogation replies. The LRF-sentence is the second sentence of the long-range interrogation request pair, LRI and LRF (see the LRI-sentence).

\$--LRF,x,xxxxxxxxx,c—c,c—c,c—c*hh<CR><LF>			
Field No.	**Format**	**Description**	**Remark**
1	x	Sequence number	
2	xxxxxxxxx	MMSI of requestor	
3	c—c	Name of requestor	
4	c—c	Function request	
5	c—c	Function reply status	

LRI – AIS Long-Range Interrogation

The long-range interrogation of the AIS unit is accomplished through the use of two sentences. The pair of interrogation sentence formatters, a LRI sentence followed by a LRF sentence, provides the information needed by a universal AIS unit to determine if it should construct and provide the reply sentences (LRF, LR1, LR2, and LR3).

$--LRI,x,a,xxxxxxxx,xxxxxxxx,llll.ll,a,yyyyy.yy,a,llll.ll,a,yyyyy.yy,a*hh<CR><LF>			
Field No.	Format	Description	Remark
1	x	Sequence number	
2	a	Control flag	
3	xxxxxxxx	MMSI of requestor	
4	xxxxxxxx	MMSI of destination	
5	llll.ll,a	Latitude – N/S	
6	yyyyy.yy,a	Longitude – E/W	
7	llll.ll,a	Latitude – N/S	
8	yyyyy.yy,a	Longitude – E/W	

OSD – Own ship data

Heading, course, speed, set and drift summary. Useful for, but not limited to radar/ARPA applications. OSD gives the movement vector of the ship based on the sensors and parameters in use.

$--OSD, x.x,A,x.x, a,x.x,a,x.x,x.x,a*hh<CR><LF>			
Field No.	Format	Description	Remark
1	x.x	Heading, degrees true	
2	A	Heading status: A = data valid, V = data invalid	
3	x.x	Vessel course, degrees true	Ignored
4	a	Course reference, B/M/W/R/P (see Note)	Ignored
5	x.x	Vessel speed	Ignored
6	a	Speed reference,B/M/W/R/P (see Note)	Ignored
7	x.x	Vessel set, degrees true	Ignored
8	x.x	Vessel drift (speed)	Ignored
9	a	Speed units, K = km/h; N = knots; S = statute miles/h	ignored

RMC – Recommended Minimum Specific GNSS Data

Time, date, position, course and speed data provided by a GNSS navigation receiver.

$-- GNS, hhmmss.ss, llll.ll, a, yyyyy.yy, a, c--c,xx,x.x,x.x,x.x,x.x,x.x,a *hh<CR><LF>			
Field No.	Format	Description	Remark
1	hhmmss.ss	UTC of position fix	
2	A	Status	
3	llll.ll,a	Latitude, N/S	
4	yyyyy.yy, a	Longitude, E/W	
5	x.x	Speed over ground, knots	
6	x.x	Course over ground, degrees true	
7	xxxxxx	Date: dd/mm/yy	
8	x.x,a	Magnetic variation, degrees, E/W	
9	a	Mode indicator	
10	a	Navigational status	

ROT – Rate of Turn

Rate of turn and direction of turn.

$--ROT, x.x, A*hh<CR><LF>			
Field No.	**Format**	**Description**	**Remark**
1	x.x	Rate of turn, °/min	
2	A	Status: A = data valid, V = data invalid	

SPW - Security Password Sentence

This sentence can be used for authentication. For this purpose the sentence has to be applied before the protected sentence (for example EPV, SSD).

$--SPW,ccc,c--c,x,c--c*hh<CR><LF>			
Field No.	**Format**	**Description**	**Remark**
1	ccc	Password protected sentence	
2	c--c	Unique Identifier	
3	x	Password level	
4	c--c	Password	

SSD – AIS Ship Static Data

This sentence is used to enter static parameters into a shipboard AIS unit. The parameters in this sentence support a number of the ITU-R M.1371 Messages.

$--SSD,c—c,c—c,xxx,xxx,xx,xx,c,aa*hh<CR><LF>			
Field No.	**Format**	**Description**	**Remark**
1	c—c	Ship's call sign	
2	c—c	Ship's name	
3	xxx	Pos. ref., point dist."A,"	
4	xxx	Pos. ref.,point dist. "B,"	
5	xx	Pos. ref., point dist."C,"	
6	xx	Pos. ref.,point dist. "D,"	
7	c	DTE indicator flag	
8	aa	Source identifier	

THS – True Heading and Status

Actual vessel heading in degrees true produced by any device or system producing true heading. This sentence includes a "mode indicator" field providing critical safety related information about the heading data, and replaces the deprecated HDT sentence.

$--THS,x.x,a*hh<CR><LF>			
Field No.	**Format**	**Description**	**Remark**
1	x.x	Heading, degrees true	
2	a	Mode indicator	

VBW – Dual Ground/Water Speed

Water-referenced and ground-referenced speed data

Field No.	Format	Description	Remark
\$--VBW, x.x, x.x, A, x.x, x.x, A, x.x, A, x.x, A*hh<CR><LF>			
1	x.x	Longitudinal water speed, knots	ignored
2	x.x	Transverse water speed , knots	ignored
3	A	Status : water speed, A = data valid, V = data invalid	ignored
4	x.x	Longitudinal ground speed , knots	
5	x.x	Transverse ground speed , knots	
6	A	Status , ground speed, A = data valid, V = data invalid	
7	x.x	Stern transverse water speed , knots	ignored
8	A	Status : stern water speed,A = data valid, V = data invalid	ignored
9	x.x	Stern transverse ground speed ,knots	ignored
10	A	Status : stern ground speed,A = data valid, V = data invalid	ignored

VHW – Water speed and heading

The compass heading to which the vessel points and the speed of the vessel relative to the water

Field No.	Format	Description	Remark
\$--VHW, x.x, T, x.x, M, x.x, N, x.x, K*hh<CR><LF>			
1	x.x, T	Heading, degrees true	
2	x.x, M	Heading, degrees magnetic	Ignored
3	x.x, N	Speed, knots	Ignored
4	x.x, K	Speed, km/h	Ignored

VSD – AIS Voyage Static Data

This sentence is used to enter information about a ship's transit that remains relatively static during the voyage

Field No.	Format	Description	Remark
\$--VSD,x.x,x.x,x.x,c—c,hhmmss.ss,xx,xx,x.x,x.x*hh<CR><LF>			
1	x.x	Type of ship and cargo category	
2	x.x	Maximum present static draught	
3	x.x	Persons on-board	
4	c—c	Destination	
5	hhmmss.ss	Estimated UTC of arrival at destination	
6	xx	Estimated day of arrival at destination	
7	xx	Estimated month of arrival at destination	
8	x.x	Navigational status	
9	x.x	Regional application flags	

VTG – Course Over Ground and Ground Speed

The actual course and speed relative to the ground

$--VTG, x.x, T, x.x, M, x.x, N, x.x, K,a*hh<CR><LF>			
Field No.	**Format**	**Description**	**Remark**
1	x.x, T	Course over ground, degrees true	
2	x.x, M	Course over ground, degrees magnetic	ignored
3	x.x, N	Speed over ground, knots	
4	x.x, K	Speed over ground, km/h	ignored
5	a	Mode indicator	

PAMC, DBG – Proprietary Sentences, Debug

The proprietary sentences are additional sentences only applicable to this product. Its main usage is for enabling testing mode and parameter settings.

This sentence is used for configuration. It commands unit with given parameters.

$PAMC,C,c-c,x,x,x,x,x,x,x*hh<CR><LF>			
Field No.	**Format**	**Description**	**Remark**
1	C	Command : "C"	
2	c-c	Function type. For example, DBG.	
3	x	Parameter Id 1 , 0-998	
4	x	Parameter value 1 , 0- 1000000000	
5	x	Parameter Id 2 , 0-998	
6	x	Parameter value 2, 0- 1000000000	
7	x	Parameter Id 3 , 0-998	
8	x	Parameter value 3, 0- 1000000000	
9	x	Parameter Id 4 , 0-998	
10	x	Parameter value 4, 0- 1000000000	

This sentence is used for retrieving responses

$PAMC,R,c-c,x,x,x,x,x,x,x*hh<CR><LF>			
Field No.	**Format**	**Description**	**Remark**
1	R	Response : "R"	
2	c-c	Function type. For example, DBG.	
3	x	Parameter Id 1 , 0-998	
4	x	Parameter value 1 , 0- 1000000000	
5	x	Parameter Id 2 , 0-998	
6	x	Parameter value 2, 0- 1000000000	
7	x	Parameter Id 3 , 0-998	
8	x	Parameter value 3, 0- 1000000000	
9	x	Parameter Id 4 , 0-998	
10	x	Parameter value 4, 0- 1000000000	

PAMC, DSC – Proprietary Sentences, Digital selective calling

When AIS transponder receives DCS messages, this sentence is used to output DSC pattern.

$PAMC,R,DSC,c-c*hh<CR><LF>			
Field No.	**Format**	**Description**	**Remark**
1	c-c	DSC pattern	

Interpretation of Output Sentences

ABK – AIS Addressed and Binary Broadcast Acknowledgement

The ABK-sentence is generated when a transaction, initiated by reception of an ABM, AIR, or BBM sentence, is completed or terminated.

Field No.	Format	Description	Remark
\$--ABK,xxxxxxxxx,x,x.x,x,x*hh<CR><LF>			
1	xxxxxxxxx	MMSI of the addressed AIS unit	
2	x	AIS channel of reception	
3	x.x	ITU-R M.1371Message ID	
4	x	Message sequence number	
5	x	Type of acknowledgement	

ACA – AIS Channel Assignment Message

An AIS device can receive regional channel management information

Field No.	Format	Description	Remark
\$--ABK,xxxxxxxxx,x,x.x,x,x*hh<CR><LF>			
1	x	Sequence Number	
2	llll.ll,a	Region northeast corner latitude – N/S	
3	yyyyy.yy,a	Region northeast corner longitude – E/W	
4	llll.ll,a	Region southwest corner latitude – N/S	
5	yyyyy.yy,a	Region southwest corner longitude – E/W	
6	x	Transition zone size	
7	xxxx	Channel A	
8	x	Channel A bandwidth	
9	xxxx	Channel B	
10	x	Channel B bandwidth	
11	x	Tx/Rx mode control	
12	x	Power level control	
13	a	Information source	
14	x	In-use flag	
15	hhmmss.ss	Time of "in use" change	

ALR – Set Alarm State

Local alarm condition and status. This sentence is used to report an alarm condition on a device and its current state of acknowledgement.

Field No.	Format	Description	Remark
\$--ALR,hhmmss.ss,xxx,A, A,c--c*hh<CR><LF>			
1	hhmmss.ss	Time of alarm condition change, UTC	
2	xxx	Unique alarm number (identifier) at alarm source	
3	A	Alarm condition, A = threshold exceeded, V = not exceeded	
4	Ax	Alarm's acknowledge state, A = acknowledged, V = unacknowledged	
5	c--c	Alarm's description text	

EPV – Command or Report Equipment Property Value

Field No.	Format	Description	Remark
\$--EPV,a,cc,c--c,x.x,c--c*hh<CR><LF>			
1	a	Sentence status flag	
2	cc	Destination equipment type	
3	c--c	Unique identifier	
4	x.x	Property identifier	
5	c--c	Value of property to be set	

LR1 – AIS Long-Range Reply Sentence 1

The LR1 sentence identifies the destination for the reply and contains the information items requested by the "A" function identification character (see the LRF sentence).

Field No.	Format	Description	Remark
\$--LR1,x,xxxxxxxxx,xxxxxxxxx,c—c,c—c,xxxxxxxxx*hh<CR><LF>			
1	x	Sequence number	
2	xxxxxxxxx	MMSI of responder	
3	xxxxxxxxx	MMSI of requestor	
4	c—c	Ship's name, 1 to 20 characters	
5	c—c	Call sign, 1 to 7 characters	
6	xxxxxxxxx	IMO number, 9-digit number	

LR2 – AIS Long-Range Reply Sentence 2

The LR2-sentence contains the information items requested by the "B, C, E and F" function identification characters,(see the LRF sentence)

Field No.	Format	Description	Remark
\$--LR2,x,xxxxxxxxx,xxxxxxxx,hhmmss.ss,llll.ll,a,yyyyy.yy,a,x.x,T,x.x,N*hh<CR><LF>			
1	x	Sequence number	
2	xxxxxxxxx	MMSI of responder	
3	xxxxxxxx	Date: ddmmyyyy, 8 digits	
4	hhmmss.ss	UTC time of position	
5	llll.ll,a	Latitude – N/S	
6	yyyyy.yy,a	Longitude, E/W	
7	x.x,T	Course over ground, degrees, true	
8	x.x,N	Speed over ground, knots	

LR3 – AIS Long-Range Reply Sentence 3

The LR3 sentence contains the information items requested by the "I, O, P, U and W" function identification character (see the LRF sentence).

$--LR3,x,xxxxxxxx,c—c,xxxxxx,hhmmss.ss,x.x,x.x,x.x,x.x,x.x,x.x*hh<CR><LF>			
Field No.	**Format**	**Description**	**Remark**
1	x	Sequence number	
2	xxxxxxxx	MMSI of responder	
3	c—c	Voyage destination, 1 to 20 chars	
4	xxxxxx	ETA date: ddmmyy	
5	hhmmss.ss	ETA time	
6	x.x	Draught	
7	x.x	Ship/cargo	
8	x.x	Ship length	
9	x.x	Ship breadth	
10	x.x	Ship type	
11	x.x	Persons, 0 to 8191	

LRF – AIS Long-Range Function

This sentence is used in both long-range interrogation requests and long-range interrogation replies. The LRF-sentence is the second sentence of the long-range interrogation request pair, LRI and LRF (see the LRI-sentence).

$--LRF,x,xxxxxxxx,c—c,c—c,c—c*hh<CR><LF>			
Field No.	**Format**	**Description**	**Remark**
1	x	Sequence number	
2	xxxxxxxx	MMSI of requestor	
3	c—c	Name of requestor	
4	c—c	Function request	
5	c—c	Function reply status	

TXT – Text Transmission

For the transmission of short text messages. Longer text messages may be transmitted by using multiple sentences.

$--TXT,xx,xx,xx,c--c*hh<CR><LF>			
Field No.	**Format**	**Description**	**Remark**
1	xx	Total number of sentences	
2	xx	Sentence number	
3	xx	Text identifier	
4	c--c	Text message	
5	c—c	Function reply status	

VDM – AIS VHF Data-Link Message

This sentence is used to transfer the entire contents of a received AIS message packet, as defined in ITU-R M.1371 and as received on the VHF Data Link (VDL), using the "six-bit" field type.

!--VDM,x,x,x,a,s—s,x*hh<CR><LF>			
Field No.	**Format**	**Description**	**Remark**
1	x	Total number of sentences needed to transfer the message	
2	x	Sentence number	
3	x	Sequential message identifier	
4	a	AIS channel	
5	s—s	Encapsulated ITU-R M.1371 radio message	
6	x	Number of fill-bits	

VDO – AIS VHF Data-Link Own-Vessel Report

This sentence is used to transfer the entire contents of an AIS unit's broadcast message packet, as defined in ITU-R M.1371 and as sent out by the AIS unit over the VHF data link (VDL) using the "six-bit" field type.

!--VDO,x,x,x,a,s—s,x*hh<CR><LF>			
Field No.	**Format**	**Description**	**Remark**
1	x	Total number of sentences needed to transfer the message	
2	x	Sentence number	
3	x	Sequential message identifier	
4	a	AIS channel	
5	s—s	Encapsulated ITU-R M.1371 radio message	
6	x	Number of fill-bits	

Appendix B

Monitoring of System Functions and Integrity

In case a failure is detected in one or more of the following functions or data, an alarm will be triggered and displayed on the menu-tree under Alarm List, and the system (transponder) will react as described in the following table.

Alarm-s description text	Alarm ID	Reaction of the system (transponder)
AIS: Tx malfunction	001	Stop transmission
AIS: Antenna VSWR exceeds limit	002	Continue operation
AIS: Rx channel 1 malfunction	003	Stop transmission on affected channel
AIS: Rx channel 2 malfunction	004	Stop transmission on affected channel
AIS: Rx channel 70 malfunction	005	Continue operation
AIS: general failure	006	Stop transmission
AIS: UTC sync invalid	007	Continue operation using indirect or semaphore synchronisation
AIS: MKD connection lost	008	Continue operation
AIS: internal / external GNSS position mismatch	009	Continue operation
AIS: NavStatus incorrect	010	Continue operation
Heading sensor offset	011	Continue operation
AIS: active AIS SART	014	Continue operation
AIS: external EPFS lost	025	Continue operation
AIS: no sensor position in use	026	Continue operation
AIS: no valid SOG information	029	Continue operation using default data
AIS: no valid COG information	030	Continue operation using default data
AIS: Heading lost/invalid	032	Continue operation using default data
AIS: no valid ROT information	035	Continue operation using default data

Antenna VSWR Exceeds Limit

There is a built-in RF output power detector, which is used to monitor the VSWR of VHF antenna port. If the antenna VSWR exceeds limit, an alarm will be reported while the unit operates continuously. The system will output an ALR 002 at related PI port.

Detection of Tx Malfunction

A built-in lock detector (high active) is used to monitor the local oscillator (PLL circuit) of the transmitter. If the operation of PLL circuit becomes abnormal, a logic low (TX malfunction) will be sent from the lock detector to notify the system. At the same time, system will also output an ALR 001 at the related PI port.

Detection of Rx Malfunction

The V5035 also has 3 built-in lock detectors (high active) to monitor each local oscillator (PLL circuit) of receiver channel 1, channel 2, and channel 70 respectively. If the operation of PLL circuit becomes abnormal, a logic low level will be sent from the lock detector to notify the system. At the same time, the system will output ALR 003 or ALR 004 or ALR 005 at the related PI port to indicate the CH1 or CH2 or CH70 RX malfunctions respectively.

Appendix C

Installation and maintenance record

The following installation record should be completed and retained on board the vessel for maintenance records.

Vessel information			
Vessel Name		Flag State	
IMO Number		MMSI Number	
Owner/Company		Radio call sign	
Type of vessel		Gross tonnage	
Length	m	Beam	m

AIS Class A Transponder information			
Transponder S/N		Pilot Plug S/N	
Junction Box S/N		GPS Ant. S/N	
Password			
Power supply	Voltage: V	Maximum output current: A	
Note			

GPS/GNSS Antenna location			
A= Distance to Bow	m	C= Dist. To Port-Side	m
B= Distance to Stern	m	D= Dist. To Starboard	m
Connected sensors and devices		
Connected Port	Equipment	Model Number
Sensor 1		
Sensor 2		
Sensor 3		
Ext Display Port		
Pilot Port		
Long Range Port		
DGNSS Data Port		
Other Device		

Installer information		
Company Name		
Technician's Name		
Telephone/Mobile No.		
Address		
Place	Date	Installer's signature

Software Revisions

The transponder is delivered with software version according to the following table which is to be filled in and maintained either by manufacturer, distributor, dealer, or installer. When software update is done, the new software (firmware) version can be identified through MKD at MENU/DIAGNOSTICS/VERSION (please refer to "Version" page 55 in the manual). Each new software upgrade requires information recorded to reflect the change made.

Software maintenance record			
Software Version	By	Date	Change
